Sommario/riassunto

Volume 75 of Reviews in Mineralogy and Geochemistry addresses a range of questions that were articulated in May 2008 at the First Deep Carbon Cycle Workshop in Washington, DC. At that meeting 110 scientists from a dozen countries set forth the state of knowledge about Earth's carbon. They also debated the key opportunities and top objectives facing the community. Subsequent deep carbon meetings in Beijing, China (2010), Novosibirsk, Russia (2011), and Washington, DC (2012), as well as more than a dozen smaller workshops, expanded and refined the DCO's decadal goals. The 20 chapters that follow elaborate on those opportunities and objectives.

Sommario/riassunto

Second-language varieties of English in the South Pacific have received scant attention, until now. This monograph offers the first book-length analysis of the sociolinguistics and morphosyntax of three representatives of South Pacific L2 English in comparison - two of which have never been described linguistically. The book describes the spread of English, its current status and use in the three island states and compares the most frequent and salient morphosyntactic features to corresponding structures in Asian and African Englishes and the Oceanic substrate languages. As part of a larger th
