1.	Record Nr.	UNINA9910466708403321
	Autore	Bentz Christian
	Titolo	Adaptive languages : an information-theoretic account of linguistic diversity / / Christian Bentz
	Pubbl/distr/stampa	Berlin ; ; Boston : , : De Gruyter Mouton, , [2018] ©2018
	ISBN	3-11-055777-0 3-11-056010-0
	Descrizione fisica	1 online resource (234 pages)
	Collana	Trends in Linguistics. Studies and Monographs [TiLSM] ; ; 316
	Disciplina	417.7
	Soggetti	Language and languages - Variation Linguistic change Word (Linguistics) Electronic books.
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Nota di contenuto	Frontmatter -- Preface -- Contents -- Abbreviations -- List of Tables -- List of Figures -- 1. Introduction -- 2. Languages as Adaptive Systems -- 3. Language Change and Population Structure -- 4. Lexical Diversity across Languages of the World -- 5. Descriptive Factors: Language "Internal" Effects -- 6. Explanatory Factors: Language "External" Effects -- 7. Grouping Factors: Language Families and Areas -- 8. Predicting Lexical Diversity: Statistical Models -- 9. Explaining Diversity: Multiple Factors Interacting -- 10. Further Problems and Caveats -- 11. Conclusions: Universality and Diversity -- 12. Appendix A: Advanced Entropy Estimators -- 13. Appendix B: Multiple Regression Assumptions -- 14. Appendix C: Mixed-effects Regression Assumptions -- Bibliography -- Index
	Sommario/riassunto	Languages carry information. To fulfil this purpose, they employ a multitude of coding strategies. This book explores a core property of linguistic coding - called lexical diversity. Parallel text corpora of overall more than 1800 texts written in more than 1200 languages are the basis for computational analyses. Different measures of lexical diversity are discussed and tested, and Shannon's measure of

uncertainty - the entropy - is chosen to assess differences in the distributions of words. To further explain this variation, a range of descriptive, explanatory, and grouping factors are considered in a series of statistical models. The first category includes writing systems, word-formation patterns, registers and styles. The second category includes population size, non-native speaker proportions and language status. Grouping factors further elicit whether the results extrapolate across - or are limited to - specific language families and areas. This account marries information-theoretic methods with a complex systems framework, illustrating how languages adapt to the varying needs of their users. It sheds light on the puzzling diversity of human languages in a quantitative, data driven and reproducible manner.
