

1. Record Nr.	UNINA9910467295503321
Autore	Smil Vaclav
Titolo	Power density : a key to understanding energy sources and uses // Vaclav Smil
Pubbl/distr/stampa	Cambridge, Massachusetts : , : MIT Press, , [2015] [Piscataqay, New Jersey] : , : IEEE Xplore, , [2015]
ISBN	9780262326926 0262326922 9780262029148 0262029146 026202914
Descrizione fisica	1 PDF (ix, 306 pages) : illustrations
Disciplina	333.79
Soggetti	Energy level densities Energy auditing Renewable energy sources Power resources Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	In this book, Vaclav Smil argues that power density is a key determinant of the nature and dynamics of energy systems. Any understanding of complex energy systems must rely on quantitative measures of many fundamental variables. Power density -- the rate of energy flux per unit of area -- is an important but largely overlooked measure. Smil provides the first systematic, quantitative appraisal of power density, offering detailed reviews of the power densities of renewable energy flows, fossil fuels, thermal electricity generation, and all common energy uses. Smil shows that careful quantification, critical appraisals, and revealing comparisons of power densities make possible a deeper understanding of the ways we harness, convert, and use energies. Conscientious assessment of power densities, he argues, proves

particularly revealing when contrasting the fossil fuel--based energy system with renewable energy conversions. Smil explains that modern civilization has evolved as a direct expression of the high power densities of fossil fuel extraction. He argues that our inevitable (and desirable) move to new energy arrangements involving conversions of lower-density renewable energy sources will require our society -- currently dominated by megacities and concentrated industrial production -- to undergo a profound spatial restructuring of its energy system.
