Sommario/riassunto

A topic relevant to everyone - friendship - is explored in this volume, the first in the SAGE Series on Close Relationships. It presents a thoughtful statement about what we know, and have yet to learn, concerning adults' friendships. The authors discuss state-of-the-art research on the interplay between social structure, individual disposition and dynamic processes of friendship, and findings on both similarities and differences across adult lifecourse stages. They provide a theoretical framework, incorporating both sociological and psychological perspectives.

Sommario/riassunto	This book focuses on abstract entity anaphora in argumentative texts with Asher's (1993) Segmented Discourse Representation Theory (SDRT) as the theoretical framework, investigating its pragmatic features and exploring its referent interpretation. The data sources include more than 160,000-word argumentative texts (80,000-word English texts and 80,000-word Chinese ones) selected from newspapers, journals, and books in China and America. At first, a comparative study was done between Chinese and English argumentative texts so as to compare the pragmatic features of abstract entity anaphora in the two languages. Then, referent

interpretation is explored within the SDRT framework. Although SDRT can account for most of the instances of abstract entity anaphora, it appears incompetent in dealing with some phenomena in the data of our study. Seven problems in SDRT were found, and corresponding solutions were proposed in an attempt to improve this theory. In general, this book has three aspects of significance. Firstly, it establishes abstract entity anaphora as an independent and a special kind of anaphora. Secondly, the research methods are the combination of empirical study and theoretical hypotheses as well as the coalescent of dynamic study and static study. Thirdly, the book is not limited to the application of SDRT to Mandarin Chinese and backward anaphora. Instead, based on the linguistic phenomena in the data, it challenges and improves the theory, and it even negates some aspects and meanwhile brings forward new solutions.

Cement Kinds and Principles of their Classification -- Portland Cement Clinker -- Hydration of Clinker Phases -- Cement Hydration -- The Properties of Cement Paste -- Concrete Properties -- Mineral Additions for Cement Production -- Hydration of Cements with Mineral Additions -- Special Cements -- New Concretes.

Sommario/riassunto

This monograph describes cement clinker formation. It covers multicomponent systems, clinker phase structures and their reactions with water, hydrate composition and structure, as well as their physical properties. The mineral additions to cement are described as are their influence on cement-paste properties. Special cements are also discussed. The microstructure of concrete is then presented, and special emphasis is given to the role of the interfacial transition zone, and the corrosion processes in the light of cement-phase composition, mineral additions and w/c ratio. The admixtures' role in modern concrete technology is described with an emphasis on superplasticizer chemistry and its cement-paste rheological modification mechanism. Cement with atypical properties, such as calcium aluminate, white, low energy and expansive cements are characterized. The last part of the book is devoted to special types of concrete such as self compacting and to reactive powders.
