

1. Record Nr.	UNINA9910476768803321
Autore	Harrou Fouzi
Titolo	Advanced Statistical Modeling, Forecasting, and Fault Detection in Renewable Energy Systems / Fouzi Harrou, Ying Sun
Pubbl/distr/stampa	2020 [s.l.] : , : IntechOpen, , 2020
ISBN	1-83880-546-X
Edizione	[1st ed.]
Descrizione fisica	1 online resource (1 p.)
Soggetti	Technology & Engineering / Power Resources / Alternative & Renewable Technology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Fault detection, control, and forecasting have a vital role in renewable energy systems (Photovoltaics (PV) and wind turbines (WTs)) to improve their productivity, efficiency, and safety, and to avoid expensive maintenance. For instance, the main crucial and challenging issue in solar and wind energy production is the volatility of intermittent power generation due mainly to weather conditions. This fact usually limits the integration of PV systems and WT's into the power grid. Hence, accurately forecasting power generation in PV and WT's is of great importance for daily/hourly efficient management of power grid production, delivery, and storage, as well as for decision-making on the energy market. Also, accurate and prompt fault detection and diagnosis strategies are required to improve efficiencies of renewable energy systems, avoid the high cost of maintenance, and reduce risks of fire hazards, which could affect both personnel and installed equipment. This book intends to provide the reader with advanced statistical modeling, forecasting, and fault detection techniques in renewable energy systems.
