

1. Record Nr.	UNINA9910476778103321
Autore	Baumber Alex
Titolo	Bioenergy crops for ecosystem health and sustainability // Alex Baumber
Pubbl/distr/stampa	New York : , : Routledge, , 2016 ©2016
ISBN	1-317-55901-0 1-315-73378-1 1-317-55900-2
Descrizione fisica	1 online resource (219 p.)
Collana	Routledge Studies in Bioenergy Series
Disciplina	333.95/39 333.9539
Soggetti	Energy crops - Environmental aspects Energy crops - Economic aspects
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover; Title; Copyright; Contents; List of figures; List of tables; Preface; PART I Introduction; 1 Bioenergy crops and sustainability; PART II Energy cropping and ecosystem health; 2 Bioenergy and climate change; 3 Deforestation and land degradation; 4 Ecological restoration and enhancement; PART III Socio-economic dimensions of energy cropping; 5 Food security; 6 Land rights and community impacts; 7 The economics of energy cropping; PART IV Moving forward; 8 Review of policy options; 9 Case studies: Australia and Brazil; 10 Conclusion; Index
Sommario/riassunto	The growing of crops for bioenergy has been subject to much recent criticism, as taking away land which could be used for food production or biodiversity conservation. This book challenges some commonly-held ideas about biofuels, bioenergy and energy cropping, particularly that energy crops pose an inherent threat to ecosystems, which must be mitigated. The book recognises that certain energy crops (e.g. oil palm for biodiesel) have generated sustainability concerns, but also asks the question "is there a better way?" of using energy crops to strategically enhance ecosystem functions. It draws on numerous case

studies, including where energy crops have had negative outcomes as well as well as cases where energy crops have produced benefits for ecosystem health, such as soil and water protection from the cropping of willow and poplar in Europe and the use of mallee eucalypts to fight salinity in Western Australia. While exploring this central argument, the volume also provides a systematic overview of the socio-economic sustainability issues surrounding bioenergy.
