Descrizione fisica	1 electronic resource (108 p.)
Soggetti	Civil engineering, surveying & building Civil engineering, surveying and building
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Proper curing of concrete has a significant influence on its quality and properties. It is essential for both the strength development of the young concrete and its resistance to external impacts. The present conference proceedings provide an overview of the different methods of suitable curing and use inspiring practical examples to show how the increasing requirements can be met in the various areas of concrete construction.
