Soggetti	Women in medicine Family planning Contraception - History Women's health services
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Introduction -- 1 Giving birth control medical credentials in Britain, 1920-70 -- 2 Sexual disorders and infertility, expanding the work of the clinics -- 3 Medicalizing birth control at the international conferences (1920-37), a British-French comparison -- 4 Building a transnational movement for family planning 1927-70 -- 5 Testing IUDs, a transnational journey of expertise -- Conclusion -- References -- Index.
Sommario/riassunto	Women's medicine highlights British female doctors' key contribution to the production and circulation of scientific knowledge around contraception, family planning and sexual disorders between 1920-70. It argues that women doctors were pivotal in developing a holistic approach to family planning and transmitting it across borders, playing a more prominent role in shaping scientific and medical knowledge than previously acknowledged. Illuminating women doctors' agency in the male-dominated field of medicine, this book reveals their practical engagement with birth control and later family planning clinics in Britain, their participation in the development of the international movement and their influence on French doctors. Drawing on a wide range of archived and published medical materials, Rusterholz sheds light on the strategies British female doctors used and the alliances they made to put forward their medical agenda and position themselves

as experts and leaders.
