Sommario/riassunto

It is widely understood that the socio-historical contexts of languages have a direct bearing on their structures and on the types of stance that communities take in relation to them. Within the discipline of linguistics these socio-historical contexts and their impacts on communities' use and understanding of language are generally referred to as sociolinguistic factors. Meanwhile within descriptive linguistics the structure of language remains core. This is evidenced in the shape of university course design, structures of textbooks, and in how linguistic knowledge is recorded. In this paper
