

1. Record Nr.	UNINA9910480149803321
Autore	Alley Michael
Titolo	The Craft of Scientific Writing [[electronic resource] /] / by Michael Alley
Pubbl/distr/stampa	New York, NY : , : Springer New York : , : Imprint : Springer, , 1996
ISBN	1-4757-2482-9
Edizione	[3rd ed. 1996.]
Descrizione fisica	1 online resource (XV, 282 p.)
Disciplina	808/.0666
Soggetti	Professional education Vocational education Applied linguistics Physics Popular works Engineering—Vocational guidance Professional & Vocational Education Applied Linguistics Physics, general Popular Science, general Job Careers in Science and Engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1 Introduction: Deciding Where to Begin -- 2 Structure: Organizing Your Documents -- 3 Structure: Providing Transition, Depth, and Emphasis -- 4 Language: Being Precise -- 5 Language: Being Clear -- 6 Language: Being Forthright -- 7 Language: Being Familiar -- 8 Language: Being Concise -- 9 Language: Being Fluid -- 10 Illustration: Making the Right Choices -- 11 Illustration: Creating the Best Designs -- 12 Writing Correspondence -- 13 Writing Proposals -- 14 Writing Instructions -- 15 Preparing Presentations -- 16 Format: Dressing Documents for Success -- 17 Actually Sitting Down to Write -- Appendix A: Avoiding the Pitfalls of Grammar and Punctuation -- Appendix B: A Usage Guide for Scientists and Engineers.
Sommario/riassunto	In October 1984, the weak writing in a scientific report made national news. The report, which outlined safety procedures during a nuclear

attack, advised industrial workers "to don heavy clothes and immerse themselves in a large body of water." The logic behind this advice was sound: Water is a good absorber of heat, neutrons, and gamma rays. Unfortunately, the way the advice was worded was unclear. Was everyone supposed to come up for air? Be completely submerged? The writing conveyed the wrong impression to the public. The report came across as saying "go jump in a lake" -- not the impression you want to give someone spending thousands of dollars to fund your research. Chances are that Dan Rather will not quote your documents on national television. Still, your writing is important. On a personal level, your writing is the way in which people learn about your work. When you communicate, you receive credit for your work. When you do not communicate, or are too slow to communicate, the credit often goes to someone else. On a larger level, your writing and the writing of other scientists influence public policy about science and engineering.
