Record Nr.	UNINA9910480431003321
Autore	Lickorish W.B.Raymond
Titolo	An Introduction to Knot Theory [[electronic resource] /] / by W.B. Raymond Lickorish
Pubbl/distr/stampa	New York, NY : , : Springer New York : , : Imprint : Springer, , 1997
ISBN	1-4612-6869-9 1-4612-0691-X
Edizione	[1st ed. 1997.]
Descrizione fisica	1 online resource (X, 204 p.)
Collana	Graduate Texts in Mathematics, , 0072-5285 ; ; 175
Disciplina	514/.224
Soggetti	Manifolds (Mathematics) Complex manifolds Group theory Mathematical physics Manifolds and Cell Complexes (incl. Diff.Topology) Group Theory and Generalizations Theoretical, Mathematical and Computational Physics
Lingua di pubblicazione	Inglese
Lingua di pubblicazione Formato	Inglese Materiale a stampa
Lingua di pubblicazione Formato Livello bibliografico	Inglese Materiale a stampa Monografia
Lingua di pubblicazione Formato Livello bibliografico Note generali	Inglese Materiale a stampa Monografia "With 114 Illustrations."
Lingua di pubblicazione Formato Livello bibliografico Note generali Nota di bibliografia	Inglese Materiale a stampa Monografia "With 114 Illustrations." Includes bibliographical references and index.
Lingua di pubblicazione Formato Livello bibliografico Note generali Nota di bibliografia Nota di contenuto	Inglese Materiale a stampa Monografia "With 114 Illustrations." Includes bibliographical references and index. 1. A Beginning for Knot Theory Exercises 2. Seifert Surfaces and Knot Factorisation Exercises 3. The Jones Polynomial Exercises 4. Geometry of Alternating Links Exercises 5. The Jones Polynomial of an Alternating Link Exercises 6. The Alexander Polynomial Exercises 7. Covering Spaces Exercises 8. The Conway Polynomial, Signatures and Slice Knots Exercises 9. Cyclic Branched Covers and the Goeritz Matrix Exercises 10. The Arf Invariant and the Jones Polynomia Exercises 11. The Fundamental Group Exercises 12. Obtaining 3-Manifolds by Surgery on S3 Exercises 13. 3-Manifold Invariants From The Jones Polynomial Exercises 15. Generalisations of the Jones Polynomial Exercises 15. Generalisations of the Jones Polynomial Exercises 16. Exploring the HOMFLY and Kauffman Polynomials Exercises References.

Knots can be studied at many levels and from many points of view. They can be admired as artifacts of the decorative arts and crafts, or viewed as accessible intimations of a geometrical sophistication that may never be attained. The study of knots can be given some motivation in terms of applications in molecular biology or by reference to paral-lels in equilibrium statistical mechanics or quantum field theory. Here, however, knot theory is considered as part of geometric topology. Motivation for such a topological study of knots is meant to come from a curiosity to know how the ge- ometry of threedimensional space can be explored by knotting phenomena using precise mathematics. The aim will be to find invariants that distinguish knots, to investigate geometric properties of knots and to see something of the way they interact with more adventurous threedimensional topology. The book is based on an expanded version of notes for a course for recent graduates in mathematics given at the University of Cambridge; it is intended for others with a similar level of mathematical understanding. In particular, a knowledge of the very basic ideas of the fundamental group and of a simple homology theory is assumed; it is, after all, more important to know about those topics than about the intricacies of knot theory.
