Sommario/riassunto

Visions, Prophecies and Divinations is an introduction to the vast and complex phenomena of prophecy and vision in the Spanish and Portuguese Empires. This book is dedicated to the study of the millenarian and messianic movements in the early modern Iberian world, and it is one of the first collections of essays on the subject to be published in English. The ten chapters range from the analysis of Mesoamerican and South American indigenous prophetic beliefs to the intellectual history of the Luso-Brazilian Jesuit Antônio Vieira and his project of a Fifth Empire, passing through new approaches to the long-lasting Sebastianist belief and its political implications.

Sommario/riassunto

This book presents contributions related to new research results presented at the 27th International Conference on Difference Equations and Applications, ICDEA 2022, that was held at CentraleSupélec, Université Paris-Saclay, France, under the auspices of the International Society of Difference Equations (ISDE), July 18–22, 2022. The book aims not only to disseminate these results but to foster further advances in the fields of difference equations and discrete dynamical systems. Also included are applications to economic growth modeling, population dynamics, epidemic modeling, game theory, control systems, and network analysis. The target audience for the book includes Ph.D. students, researchers, educators, and practitioners in these fields.
