

1. Record Nr.	UNINA9910482958703321
Autore	Xie Xiaoyuan
Titolo	Essential Spectrum-based Fault Localization // by Xiaoyuan Xie, Baowen Xu
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2021
ISBN	981-336-179-4
Edizione	[1st ed. 2021.]
Descrizione fisica	1 online resource (XII, 172 p. 17 illus.)
Disciplina	005.14
Soggetti	Computer programs - Testing Software engineering - Management Computer programming Software Testing Software Management Programming Techniques
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Chapter 1. Introduction -- Chapter 2. A Theoretical Framework for Spectrum-based Fault Localization -- Chapter 3. Theoretical Comparison Among Risk Evaluation Formulas -- Chapter 4. On the Maximality of Spectrum-based Fault Localization -- Chapter 5. A Generalized Theoretical Framework for Hybrid Spectrum-based Fault Localization -- Chapter 6. Practicality of the Theoretical Frameworks -- Chapter 7. Tackling the Oracle Problem in Spectrum-based Fault Localization -- Chapter 8. Spectrum-based Fault Localization for Multiple Faults -- Chapter 9. Conclusion.
Sommario/riassunto	Program debugging has always been a difficult and time-consuming task in the context of software development, where spectrum-based fault localization (SBFL) is one of the most widely studied families of techniques. While it's not particularly difficult to learn about the process and empirical performance of a particular SBFL technique from the available literature, researchers and practitioners aren't always familiar with the underlying theories. This book provides the first comprehensive guide to fundamental theories in SBFL, while also addressing some emerging challenges in this area. The theoretical

framework introduced here reveals the intrinsic relations between various risk evaluation formulas, making it possible to construct a formula performance hierarchy. Further extensions of the framework provide a sufficient and necessary condition for a general maximal formula, as well as performance comparisons for hybrid SBFL methods. With regard to emerging challenges in SBFL, the book mainly covers the frequently encountered oracle problem in SBFL and introduces a metamorphic slice-based solution. In addition, it discusses the challenge of multiple-fault localization and presents cutting-edge approaches to overcoming it. SBFL is a widely studied research area with a massive amount of publications. Thus, it is essential that the software engineering community, especially those involved in program debugging, software maintenance and software quality assurance (including both newcomers and researchers who want to gain deeper insights) understand the most fundamental theories – which could also be very helpful to ensuring the healthy development of the field.
