Note generali	Includes index.
Nota di contenuto	Linked data -- Machine learning -- Mobile web, sensors and semantic streams -- Natural language processing and information retrieval -- Reasoning -- Semantic data management, big data, and scalability -- Services, APIs, processes and cloud computing -- Smart cities, urban and geospatial data -- Trust and privacy -- Vocabularies, schemas, and ontologies.
Sommario/riassunto	The 47 revised full papers presented together with three invited talks

were carefully reviewed and selected from 204 submissions. This program was completed by a demonstration and poster session, in which researchers had the chance to present their latest results and advances in the form of live demos. In addition, the PhD Symposium program included 10 contributions, selected out of 21 submissions. The core tracks of the research conference were complemented with new tracks focusing on linked data; machine learning; mobile web, sensors and semantic streams; natural language processing and information retrieval; reasoning; semantic data management, big data, and scalability; services, APIs, processes and cloud computing; smart cities, urban and geospatial data; trust and privacy; and vocabularies, schemas, and ontologies.
