Sommario/riassunto	In the contemporary world the meeting of Buddhism and Islam is most often imagined as one of violent confrontation. Indeed, the Taliban's destruction of the Bamiyan Buddhas in 2001 seemed not only to reenact the infamous Muslim destruction of Nalanda monastery in the thirteenth century but also to reaffirm the stereotypes of Buddhism as a peaceful, rational philosophy and Islam as an inherently violent and irrational religion. But if Buddhist-Muslim history was simply repeated instances of Muslim militants attacking representations of the Buddha, how had the Bamiyan Buddha statues survived thirteen hundred years of Muslim rule? Buddhism and Islam on the Silk Road demonstrates that the history of Buddhist-Muslim interaction is much richer and more complex than many assume. This groundbreaking book covers Inner

Asia from the eighth century through the Mongol empire and to the end of the Qing dynasty in the late nineteenth century. By exploring the meetings between Buddhists and Muslims along the Silk Road from Iran to China over more than a millennium, Johan Elverskog reveals that this long encounter was actually one of profound cross-cultural exchange in which two religious traditions were not only enriched but transformed in many ways.

Sommario/riassunto

This book will enlarge our grasp of global migration phenomena, offering insights into the fascinating, at times startling, realities of human migration in Asia. The chapters presented in this volume offer variety in not only theme but in approach to migration in Southeast and East Asia. Particularly welcome for a volume on migration studies, a discipline that has long been dominated by economists, sociologists, and geographers, are the chapters that approach the subject from an anthropological or ethnological perspective. These chapters bring to our attention details of the lives of migrants and their communities that are often lost in studies of migration statistics, the economic aspects of migration, or aspects of urban geography with which we have become more familiar. Some chapters are more theoretical in nature and herein lie some of the most important reasons for studying migration involving Asian countries: migration studies have, until relatively recently, developed their theoretical insights on the basis of European migration to North America. Asian migration offers new theoretical challenges to migration scholars; its dynamism is such that predictions of what is to come are not for the risk averse. The empirical studies here provide fascinating details of the strategies used by asylum seekers, of marriage migration, of the role of homeland languages in education, of the workings of ethnic entrepreneurs, of the media's role in sustaining Chinese communities, and on the incentive structures that are helping to shape return flows to China. For readers who are from Asian countries, this book will illuminate the changes that are taking place in your region as a result of migration. For readers from developed and other societies, it will provide new insights into migration involving this understudied part of the world, an area that supplies the lion's share of immigrants to developed economies, and the area whose rapid economic development will soon make it their greatest competition for migrants, especially the highly skilled.
