

1. Record Nr.	UNINA9910483051603321
Titolo	Guide to maritime informatics // Alexander Artikis, Dimitris Zissis, editors
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2021] Â©2021
ISBN	3-030-61852-8
Edizione	[1st ed. 2021.]
Descrizione fisica	1 online resource (XV, 333 p. 114 illus., 111 illus. in color.)
Disciplina	387.5
Soggetti	Shipping - Technological innovations
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Maritime Reporting Systems -- Navigating the Ocean of Publicly Available Maritime Data -- Maritime Data Processing in Relational Databases -- Maritime Data Analytics -- Visual Analytics of Vessel Movement -- Online Mobility Tracking against Evolving Maritime Trajectories -- Link Discovery for Maritime Monitoring -- Composite Maritime Event Recognition -- Uncertainty handling for maritime route deviation -- Maritime network analysis: connectivity and spatial distribution -- Shipping economics and analytics.
Sommario/riassunto	In the last 25 years, information systems have had a disruptive effect on society and business. Up until recently though, the majority of passengers and goods were transported by sea in many ways similar to the way they were at the turn of the previous century. Gradually, advanced information technologies are being introduced, in an attempt to make shipping safer, greener, more efficient, and transparent. The emerging field of Maritime Informatics studies the application of information technology and information systems to maritime transportation. Maritime Informatics can be considered as both a field of study and domain of application. As an application domain, it is the outlet of innovations originating from data science and artificial intelligence; as a field of study, it is positioned between computer science and marine engineering. This new field's complexity lies within this duality because it is faced with disciplinary barriers yet demands a systemic, transdisciplinary approach. At present, there is a growing

body of knowledge that remains undocumented in a single source or textbook designed to assist students and practitioners. This highly useful textbook/reference starts by introducing required knowledge, algorithmic approaches, and technical details, before presenting real-world applications. The aim is to present interested audiences with an overview of the main technological innovations having a disruptive effect on the maritime industry, as well as to discuss principal ideas, methods of operation and applications, and future developments. The material in this unique volume provides requisite core knowledge for undergraduate or postgraduate students, employing an analytical approach with numerous real-world examples and case studies.
