Sommario/riassunto	This book provides essential information on the morphology, biology, phytochemistry, pharmaceutical prospects, evolution, phylogeny, biogeography, and taxonomy of Paris (Melanthiaceae), a morphologically distinctive plant genus with great economic importance. Since the establishment of this genus, 70 species and 24 subspecific taxa have been described, resulting in considerable confusion in species delimitation. In this book, the taxonomy of all described taxa is carefully revised. Based on multi-disciplinary evidences, a revised classification system of Paris containing five sections is outlined. Every species is provided with a concise but diagnostic description, a color illustration, photographs that highlight distinguishing characters, examined specimens and distribution range. The interspecific relationships are clarified with an identification key. This monograph offers taxonomists, evolutionary biologists, ecologists, horticulturalists, phytochemists, and practitioners a thorough and up-

to-date overview about this interesting plant group. It is equally valuable for undergraduate and graduate students, teachers and professionals engaged in related fields.

Sommario/riassunto	Pete Nelson, the world's best-known treehouse designer and builder, wants to put readers in trees--his motto is, "get 'er done, so you can BE in a TREE." His new book is a comprehensive source of inspiration and practical information about treehouse design and construction. To that end, he shares the basics of treehouse construction with his own recent projects as case studies. Using photographs taken especially for this project along with diagrams, he covers the selection and care of trees, and explains the fundamentals of building treehouse platforms. To ignite the imagination, Nelson presents 27 treehouses in the United States, Europe, and Africa. The book will be indispensable to anyone who aspires to have a treehouse, from the armchair dreamer, to the amateur builder, to the professional contractor.
