Sommario/riassunto	This volume presents case studies from around the world aiming to serve as a hands-on book for management and treatment of archaeological World Heritage properties. It comprises not only sites inscribed as World Heritage due to their archaeological character but

also World Heritage properties where the analysis of their archaeological dimension provides a deeper and better understanding of the assets and includes the potential for disseminating this knowledge. The book has an important practical value, since all the works presented here illustrate - with practical examples, the best and most appropriate ways to manage World Heritage properties. The aim of the heritage managers at these World Heritage sites is to improve conservation and increase understanding and communication in such a way that the communities living in those sites or who earn a livelihood from them can be positively affected by these initiatives. The book presents exemplary models of heritage management in World Heritage properties—an issue not treated in depth up to now and Best Practices in this management. Therefore, this volume becomes a new, original source presenting model strategies to be followed by other initiatives in order to improve the consideration and treatment of the most outstanding valued sites considered by UNESCO.
