

1. Record Nr.	UNINA9910483116603321
Autore	Mosley Connor Devyn William
Titolo	Enhanced polarisation control and extreme electric fields : advances in terahertz spectroscopy applied to anisotropic materials and magnetic phase transitions // Connor Devyn William Mosley
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2021]
ISBN	3-030-66902-5
Descrizione fisica	1 online resource (xv, 115 pages) : illustrations
Collana	Springer theses
Disciplina	543.5
Soggetti	Terahertz spectroscopy Materials - Magnetic properties Phase transformations (Statistical physics)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"Doctoral thesis accepted by University of Warwick, Coventry, England."
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Intro -- Supervisor's Foreword -- Abstract -- Publications -- Acknowledgements -- Contents -- 1 Introduction -- 1.1 Crystal Optics -- 1.1.1 The Dielectric Tensor -- 1.1.2 Principal Axes and the Index Ellipsoid -- 1.1.3 Plane Wave Propagation Through an Anisotropic Medium -- 1.1.4 Effects of an Anisotropic Medium on the Polarisation State of Light -- 1.2 Describing the Polarisation State of Electromagnetic Waves -- 1.2.1 Ellipticity and Orientation Angle -- 1.2.2 Alternative Descriptions of the Polarisation State -- 1.3 Electromagnons in Improper Ferroelectrics -- 1.3.1 Magnons -- 1.3.2 Electromagnons -- 1.3.3 Improper Ferroelectricity and Electromagnons in CuO -- 1.4 Structure of This Thesis -- References -- 2 Terahertz Time-Domain Spectroscopy -- 2.1 Generation of Broadband Terahertz Radiation -- 2.1.1 Photoconductive Emitters -- 2.1.2 Optical Rectification -- 2.2 Electro-optic Sampling -- 2.2.1 Polarisation-Resolved Electro-optic Sampling -- 2.3 THz-TDS Experimental Setup -- 2.3.1 Performing a THz-TDS Experiment -- 2.4 Extracting Sample Properties and Polarisation Information ... -- 2.4.1 Complex Refractive Index -- 2.4.2 Ellipticity and Orientation Angle -- 2.5 Summary -- References -- 3 Rotatable-Polarisation Terahertz Time-Domain Spectroscopy of Anisotropic Media -- 3.1 Investigating Anisotropy at Terahertz Frequencies -- 3.1.1 Disambiguating Spectral Features Using

Polarisation-Resolved Detection Methods -- 3.1.2 Terahertz
Polarimetry and Ellipsometry -- 3.1.3 Methods of Terahertz Polarisation
Rotation -- 3.2 Rotatable-Polarisation Terahertz Time-Domain
Spectrometer -- 3.2.1 Rotating the Terahertz Polarisation State --
3.2.2 Polarisation-Resolved Detection Method and Alignment -- 3.2.3
Calibration of the Terahertz Emission Strength -- 3.2.4 Polarisation
State of the Rotated Terahertz Pulses.
3.3 Comparison of Rotatable Polarisation to Projection via Wire-Grid
Polarisers -- 3.4 Experimental Implementation of RP-THz-TDS -- 3.4.1
Sample Details -- 3.4.2 Mapping Birefringence and Identifying
Polarisation Eigenvectors Using RP-THz-TDS -- 3.4.3 Extracting the
Full Complex Refractive Index Using RP-THz-TDS -- 3.4.4 Anisotropic
Absorption and Chromatic Dispersion in CuO -- 3.5 Summary --
References -- 4 Scalable Interdigitated Photoconductive Emitters for
the Electrical Modulation of Terahertz Beams with Arbitrary Linear
Polarisation -- 4.1 Photoconductive Emitter Geometry and Terahertz
Polarisation State -- 4.1.1 Electric Dipole Radiation from
Photoconductive Emitters -- 4.1.2 Controlling the Terahertz
Polarisation State with the Emitter Geometry -- 4.2 Multi-Pixel
Interdigitated Photoconductive Emitters -- 4.2.1 Emitter Concept and
Design -- 4.2.2 Device Fabrication -- 4.2.3 Simulated Device
Performance -- 4.3 Experimental Device Performance -- 4.3.1 Initial
Electrical Biasing Tests -- 4.3.2 Generating Arbitrary Linear polarisation
States via Electrical Control -- 4.4 Rapid Modulation of Circular
Polarisation States for Circular ... -- 4.4.1 Converting from Linear to
Circular Polarisation via a Prism -- 4.4.2 Stokes Parameters -- 4.4.3
Experimental Setup -- 4.4.4 Experimental Results -- 4.5 Summary --
References -- 5 High-Field Terahertz Time-Domain Spectroscopy of
Single-Walled Carbon Nanotubes and CuO -- 5.1 Terahertz
Spectroscopy Using Extreme Electric Fields -- 5.1.1 Generating High-
Field Terahertz Radiation -- 5.1.2 Choosing the Right High-Field THz
Source for You -- 5.2 High-Field Terahertz Time-Domain Spectrometer
-- 5.2.1 Tilted Pulse-Front Pumping in LiNbO₃ -- 5.2.2 Experimental
Setup -- 5.2.3 Controlling the Electric Field Strength of Terahertz
Pulses -- 5.3 A Test Case of Nonlinear THz Transmission: Indium
Antimonide.
5.3.1 Experimental Results -- 5.4 Nonlinear THz Transmission in
Single-Walled Carbon Nanotube Films -- 5.4.1 Experimental Results --
5.5 Electric Field-Dependent THz Transmission of CuO -- 5.5.1 Electric
Field-Dependence of the Electromagnon Response in CuO -- 5.6
Summary -- References -- 6 Conclusions -- 6.1 Outlook and Future
Work -- Appendix Tracking Disorder Broadening and Hysteresis in
First-Order Phase Transitions via the Electromagnon Response in
Improper Ferroelectrics.
