

1. Record Nr.	UNINA9910483146203321
Titolo	Catalysis for clean energy and environmental sustainability . Volume 2 : petrochemicals and refining processes // edited by K. K. Pant, Sanjay Kumar Gupta, Ejaz Ahmad
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2021] ©2021
ISBN	3-030-65021-9
Descrizione fisica	1 online resource (754 pages) : illustrations
Disciplina	665.53
Soggetti	Green chemistry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- Preface -- Contents -- Recent Advances in Hydrotreating/Hydrodesulfurization Catalysts: Part I: Nature of Active Phase and Support -- 1 Introduction -- 2 Chemistry of Deep Hydrotreating/Hydrodesulfurization -- 3 Process Description -- 4 Physicochemical Properties -- 4.1 Chemical Composition of Catalysts -- 4.2 Structure of Support -- 4.3 Acidity -- 4.4 Textural Properties -- 5 Characterization and Testing of HDT Catalysts -- 6 Advances in Hydrotreating Catalysts -- 6.1 Nature of Active Phase in HDT/HDS Catalysts -- 6.2 Supports or Carriers -- 6.3 Unsupported Catalysts -- 7 Conclusions -- References -- Recent Advances in Hydrotreating/Hydrodesulfurization Catalysts: Part II-Catalyst Additives, Preparation Methods, Activation, Deactivation, and Regeneration -- 1 Introduction -- 2 Preparation of Hydrotreating Catalysts -- 3 Advances in Hydrotreating Catalysts -- 3.1 Additives/Modifiers and Their Effects -- 3.2 Catalyst Preparation Methods -- 4 Catalyst Activation/Sulfidation -- 5 Catalyst Deactivation -- 5.1 Deactivation Due to Coke -- 5.2 Deactivation Due to Metals -- 5.3 Deactivation by Poisoning of Active Sites -- 5.4 Change in the Structure of the Catalyst (Metal Sintering/Agglomeration) -- 6 Catalyst Regeneration -- 7 Catalysts for Different Hydrotreating Feedstocks -- 7.1 Selection of Hydrotreating Catalysts for Gasoline and Gas Oils -- 7.2 Selection of Hydrotreating Catalysts for Heavy

Feedstocks Such as Residue -- 8 Commercial HDT/HDS Catalysts -- 9
Conclusions -- References -- Recent Developments in FCC Process
and Catalysts -- 1 Introduction -- 2 Fluid Catalytic Cracker -- 3
History of the FCC Process -- 4 The FCC Process -- 4.1 Feed Selection
and Pretreatment -- 4.2 Reactor-Stripper-Regenerator Section -- 4.3
Catalyst Separation -- 4.4 Main Fractionation of Products and Gas
Recovery -- 4.5 Modified Catalytic Cracking Processes.
4.6 Catalyst Deactivation and Coke Formation -- 5 The FCC Catalyst --
5.1 Zeolite -- 5.2 Matrix -- 5.3 Binder and Filler -- 5.4 FCC Catalyst
Additives -- 5.4.1 CO Combustion Promoter -- 5.4.2 NO_x Reduction
Additives -- 5.4.3 SO_x-Reduction Additives -- 5.4.4 Metal Passivators
-- 5.4.5 ZSM-5 -- 5.4.6 Gasoline Sulfur Reduction Additive -- 5.4.7
Bottom-Cracking Additives -- 6 Chemistry -- 6.1 Cracking Reactions
-- 6.2 Isomerization Reactions -- 6.3 Coke Formation -- 6.4 Hydrogen
Transfer Reactions -- 6.5 Undesirable Reactions -- 7 Propylene
Maximization -- 7.1 Operational Modifications for Propylene
Manufacture -- 7.2 ZSM-5 Addition -- 8 Resid Processing -- 9
Summary -- References -- Emerging Trends in Solid Acid Catalyst
Alkylation Processes -- 1 Introduction -- 1.1 C₄-Alkylation -- 1.1.1
C₄-Alkylation Fundamentals -- 1.1.2 Current/Conventional Alkylation
Processes: Mineral Acids -- 1.1.3 Development of Environmentally
Friendly Solid Catalysts for Alkylation Processes -- 1.1.4 Challenges
of Zeolite-Based Catalysts: Deactivation -- 1.1.5 Zeolite-Based
Commercial C₄ Alkylation Processes: Key Feature Requirement --
CB&I, Albemarle Corp., and Neste Corp. AlkyClean™ Process --
LURGI EUROFUEL® Process -- KBR K-SAAT™ Process -- 1.2 Aromatic
Alkylation: Industrial Importance -- 1.2.1 Hydroalkylation of Benzene
to Cyclohexylbenzene (CHB) -- 1.2.2 Conventional Process
for Synthesis of CHB -- 1.2.3 Alternative Route for Hydroalkylation
of Benzene -- 1.3 Toluene Alkylation with Methanol to Styrene -- 1.3.1
Conventional Process for Production of Styrene -- Dehydrogenation
of Ethylbenzene Under Adiabatic Conditions -- Auto-oxidation
of Ethylbenzene, Followed by Dehydration (SMPO Process) -- 1.3.2
Development of Alternate Process for Styrene Production -- 1.3.3
Chemistry of Side-Chain Methylation of Toluene with Methanol.
1.3.4 Industrial Process for Toluene Alkylation with Methanol
to Styrene: Exelus Process -- 1.4 Future Prospective -- 1.4.1 C₄
Alkylation -- 1.4.2 Hydroalkylation of Benzene -- 1.4.3 Toluene
Alkylation with Methanol to Styrene -- References -- C₃-Based
Petrochemicals: Recent Advances in Processes and Catalysts -- 1
Introduction -- 1.1 Natural Sources of C₃ Molecule: Current Scenario
-- 2 Propylene Production -- 2.1 Traditional Sources -- 2.1.1 Non-
catalytic Route: Thermal Steam Cracking (TSC) Process -- 2.1.2
Catalytic Routes -- 2.2 Alternative Sources/Processes: On-Purpose
Propylene Production -- 2.2.1 Propane Dehydrogenation (PDH) -- 2.2.2
Olefin Inter-conversion and Metathesis -- 2.2.3 Methanol to Olefins
(MTO)/Methanol-to-Propylene (MTP) Process -- 3 Commercial
Propylene Production with Feed Suitability -- 4 Propylene Derivatives --
4.1 Propylene Oxide (PO) -- 4.1.1 Propylene Oxide (PO) Production:
Commercial Processes -- 4.1.2 Future Outlook of PO Production -- 4.2
Acrylonitrile (ACN) -- 4.2.1 Acrylonitrile Production: Commercial
Advancement -- Acetylene Route -- Ammoxidation Route -- 4.2.2
Recent Advances in Ammoxidation Catalyst -- 4.2.3 Emerging
Alternatives: Propane Ammoxidation and Its Catalyst -- 4.3 Acrylic Acid
-- 4.3.1 Chemical and Technical Aspects of Acrylic Acid -- 4.3.2 Global
Acrylic Acid Market Overview -- 4.3.3 Acrylic Acid Production: Recent
Trend vs. Conventional Production -- 4.3.4 Processes
for the Production of Acrylic Acid: Commercial Perspective -- Acrylic

Acid Production from Propylene by Catalyzed Oxidation -- Acrylic Acid from Propane -- 4.4 Isopropyl Alcohol (IPA) and Its Industrial Importance -- 4.4.1 Industrial Journey of IPA Production Processes -- Indirect Hydration of Propylene -- Direct Hydration of Propylene -- Emerging Alternative: IPA from Acetone -- Upcoming Trend with Respect to Current Research.

5 Concluding Remarks and Industrial Outlook -- References --

Selective Hydrogenation of 1,3-Butadiene to 1-Butene: Review on Catalysts, Selectivity, Kinetics and Reaction Mechanism -- 1 Introduction -- 1.1 Significance and Background -- 2 Selective Hydrogenation of 1,3-Butadiene: Key Factors in Catalysts Design -- 2.1 Kinetic Study and Reaction Pathway -- 2.2 Reaction Order of Reactants: 1,3-Butadiene, Hydrogen, 1-Butene -- 2.3 DFT Studies on Catalytic Hydrogenation of Butadiene -- 2.4 Influence of the Support on Hydrogenation of 1,3-Butadiene -- 2.5 Structure Sensitive and the Effect of Metal Dispersion -- 2.6 The Use of Additives, Adspecies and Promoters -- 3 Summary and Future Outlook --

References -- Thermocatalytic Conversion of Natural Gas to Petrochemical Feedstocks Via Non-oxidative Methods: Theoretical and Experimental Approaches -- 1 Introduction -- 1.1 Thermodynamics of MDA -- 1.1.1 Effect of Co-feeding Agents -- 1.1.2 Effect of Hydrogen Removal in MDA -- 1.2 Catalysts for MDA Reaction -- 1.2.1 Effect of Mo Dispersion -- 1.2.2 Effect of Zeolite Acidity -- 1.2.3 Promoter Effect over MDA Catalyst -- 1.2.4 Induction Effect: Carburization -- 1.3 Mechanistic Insights of MDA Reaction -- 1.4 Reaction Parameters -- 1.4.1 Effect of Temperature -- 1.4.2 Effect of Pressure -- 1.4.3 Effect of Space Velocity -- 1.5 Reactor Configuration -- 1.5.1 Circulating Fluidized-Bed Reactor Setup -- 1.5.2 Membrane Reactor -- 1.6 Summary -- References --

Insights into Sustainable C-H Bond Activation -- 1 Introduction -- 1.1 C-H Activation: A Green and Economical Synthetic Protocol -- 1.2 Challenges in C-H Activation Reactions -- 2 C-H Activations Using Heterogeneous Catalysis -- 2.1 C-H Arylation -- 2.2 Addition of C-H Bond to Vinylsilanes -- 2.3 C-H Acylation -- 2.4 C-H Cyanation -- 2.5 C-H Oxygenation -- 2.6 C-H Nitrogenation -- 2.7 C-H Halogenation. 2.8 Fujiwara-Moritani Reaction -- 2.9 Miscellaneous Reaction -- 3 Homogeneous Reusable Media for C-H Functionalization Reactions -- 4 Oxidizing Directing Groups for C-H Functionalizations -- 4.1 NO Bond as an Internal Oxidant -- 4.2 OO Bond as an Internal Oxidant -- 4.3 N-N Bond as an Internal Oxidant -- 4.4 N-S Bond as an Internal Oxidant -- 4.5 N-C Bond as an Internal Oxidant -- 4.6 S-Cl Bond as an Internal Oxidant -- 4.7 Si-H Bond as an Internal Oxidant -- 4.8 Other Internal Oxidizing Directing Groups -- 5 Synthesis in Green Solvents Using C-H Activation -- 5.1 Water -- 5.2 Polyethylene Glycols (PEGs) -- 5.3 2-Methyltetrahydrofuran (2-MeTHF) -- 5.4 - Valerolactone (GVL) -- 6 Photocatalytic C-H Bond Activations -- 7 Microwave-Assisted C-H Activation Reactions -- 8 Electrochemical C-H Functionalization -- 9 Conclusions -- References --

Flue Gas Treatment via Dry Reforming of Methane -- 1 Introduction -- 2 Thermodynamics Equilibrium Aspects of the DRM Reaction -- 2.1 Temperature Has an Effect on Methane Conversion at Equilibrium -- 2.2 Temperature Also Has an Effect on Product Yield at Equilibrium -- 3 Effect of Changing Operating Conditions of the Reactor on Conversions, H₂/CO Ratio and Carbon Deposition from Experimental Observations Using a Ni/MgAl₂O₄ Catalyst -- 3.1 Increasing Reactor Temperature Increases Conversion -- 3.2 Increasing Reactor Temperature Marginally Increases the H₂/CO Ratio -- 3.3 More Carbon Formed on Catalyst at Low Temperature -- 3.4 Adding O₂ Reduces CO₂ Conversion

Without Affecting CH₄ Conversion Significantly -- 3.5 H₂/CO Ratio Marginally Increases with Increase in O₂ Concentration -- 3.6 O₂ Reduces Carbon Deposition on the Catalyst -- 3.7 XPS Analysis of the Spent Catalyst -- 4 Catalyst Improvement Strategies to Alleviate Coking -- 4.1 Adding Basic Component to Ni Catalyst System May Reduce Coke Deposition.
4.2 Potassium Aluminate Shown to Enhance Coke Resistance Property of NiAl₂O₄.
