

1. Record Nr.	UNINA9910483222103321
Titolo	Advances in Geoethics and Groundwater Management : Theory and Practice for a Sustainable Development : Proceedings of the 1st Congress on Geoethics and Groundwater Management (GEOETH&GWM'20), Porto, Portugal 2020 // edited by Manuel Abrunhosa, António Chambel, Sílvia Peppoloni, Helder I. Chaminé
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2021
ISBN	3-030-59320-7
Edizione	[1st ed. 2021.]
Descrizione fisica	1 online resource (xiv, 523 pages) : illustrations
Collana	Advances in Science, Technology & Innovation, IEREK Interdisciplinary Series for Sustainable Development, , 2522-8722
Disciplina	628.114 551.49
Soggetti	Earth sciences Water Hydrology Sustainability Ethics Education Earth Sciences Moral Philosophy and Applied Ethics Hidrologia d'aigües subterrànies Explotació de recursos hidràulics Desenvolupament sostenible Congressos Llibres electrònics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1. Relational value as an argument to protect geological and hydrogeologic goods -- 2. Ethical and moral issues relative to groundwater -- 3. Some basic considerations on the applied ethics to water resources management -- 4. The precautionary principle and

groundwater -- 5. Geoethics for operating in the human niche -- 6. Cross-cutting role of groundwater in achieving the SDGs and an ethical approach -- 7. Inclusion of indigenous communities in water resources management in the Middle West of Brazil: a proposal -- 8. Ganga river: a paradox of purity and pollution in India due to unethical practice -- 9. Evaluating public opinion on groundwater extraction from public comment submissions and Google Trends -- 10. Public perceptions and attitudes towards groundwater and climate change. The case of the Barbate river basin. .

## Sommario/riassunto

This book gathers the peer-reviewed proceedings of the 1st congress on Geoethics & Groundwater Management (GEOETH&GWM'20), held in Porto, Portugal, in an online format on 18-22 May 2020. Hosted in School of Engineering (ISEP), Polytechnic of Porto based on Porto city (a UNESCO World Heritage Site), the international conference focused on what has now been dubbed “hydrogeoethics”, a novel transdisciplinary, scientific field integrating all dimensions of geoethics in groundwater science and practice. Given its scope, the book is of interest to all researchers and practitioners in the geosciences, hydrology, water resources, hydrogeology, natural resources management, environment, engineering, law, sociology, education, philosophy, culture, among others. This joint congress is the result of a collaborative agreement between the IAH (International Association of Hydrogeologists) and IAPG (International Association for Promoting Geoethics) and reflects the need for concerted actions to achieve sustainable development. The diversity, scale, significance and increasing magnitude of anthropogenic interactions with aquifers and groundwater, which often involve conflicting values or interests, call for analysis, discussions and decisions on the part of the agents involved, e.g. groundwater scientists, policymakers, managers, organisations, professionals and citizens. This approach calls for a responsible, sustainable and human approach to groundwater use and management. The groundwater community involved in the exploration and exploitation, use and management of this increasingly vital natural resource is becoming more and more aware that ethical issues pervade all our attitudes from concept to action and need to be addressed. Diverse values and cultures, science and education, law and policies, human and natural environments and the public and the economic sectors view groundwater and its value and/or role differently. The authors believe that in a globalised and interconnected world, common ground must be found in the interest of peace, human development and sustainability. The main topics covered here include: 1. Fundamentals of hydrogeoethics: cultures, principles and geoethical values on groundwater science and engineering 2. Lessons for a resilient and sustainable future with hydrogeoethics: case studies of geoethics in groundwater science-engineering, profession, and management 3. Scientific and humanistic components of hydrogeoethics in groundwater education and professional training 4. Socio-hydrogeology and ethical groundwater management 5. Geoethics of decision making under uncertainty and ethical issues in neglecting groundwater functioning 6. Groundwater: geological, legal, social, and ethical challenges of a unique natural resource .
