

1. Record Nr.	UNINA9910483236703321
Titolo	Proceedings of the Fourteenth International Conference on Management Science and Engineering Management : Volume 2 // edited by Jiuping Xu, Gheorghe Duca, Syed Ejaz Ahmed, Fausto Pedro García Márquez, Asaf Hajiyev
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2021
ISBN	3-030-49889-1
Edizione	[1st ed. 2021.]
Descrizione fisica	1 online resource (831 pages)
Collana	Advances in Intelligent Systems and Computing, , 2194-5365 ; ; 1191
Disciplina	658.404 620.0068
Soggetti	Computational intelligence Quantitative research Computational Intelligence Data Analysis and Big Data
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Advancement of Supply Chain, Strategic Planning and Industry Innovation Based on the Fourteenth ICMSEM Proceedings -- The Traveling Salesman Problem: Route Planning of Recharging Station-assisted Drone Delivery -- The Vehicle Routing Problem with Drone for the Minimum CO <sub>2</sub> Emissions -- A Two-stage Stochastic Programming Model for Pre-positioning of Relief Supplies -- A Metaheuristic Approach for Quantifying the Eects of the Structural Complexity in Facility Location Problems -- The Battle to Decrease the Impact of the Structural Complexity in Supply Chains: An Algorithmic Approach -- Presale Scheme Optimization of Short Life Cycle Products Considering Reference Price Eect.
Sommario/riassunto	This book gathers the proceedings of the 14th International Conference on Management Science and Engineering Management (ICMSEM 2020). Held at the Academy of Studies of Moldova from July 30 to August 2, 2020, the conference provided a platform for researchers and practitioners in the field to share their ideas and experiences. Covering

a wide range of topics, including hot management issues in engineering science, the book presents novel ideas and the latest research advances in the area of management science and engineering management. It includes both theoretical and practical studies of management science applied in computing methodology, highlighting advanced management concepts, and computing technologies for decision-making problems involving large, uncertain and unstructured data. The book also describes the changes and challenges relating to decision-making procedures at the dawn of the big data era, and discusses new technologies for analysis, capture, search, sharing, storage, transfer and visualization, as well as advances in the integration of optimization, statistics and data mining. Given its scope, it will appeal to a wide readership, particularly those looking for new ideas and research directions. .
