1. Record Nr. UNINA9910483447503321

Autore	Bienvenido-Huertas David
Titolo	Adaptive thermal comfort of indoor environment for residential buildings : efficient strategy for saving energy / / David Bienvenido-Huertas, Carlos Rubio-Bellido
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2021
ISBN	981-16-0906-3
Edizione	[1st ed. 2021.]
Descrizione fisica	1 online resource (79 pages) : illustrations
Collana	SpringerBriefs in Architectural Design and Technology, , 2199-5818
Disciplina	230
Soggetti	Air conditioning Buildings - Environmental engineering Buildings - Design and construction Sustainable Architecture/Green Buildings Energy Policy, Economics and Management Building Types and Functions Engineering Thermodynamics, Heat and Mass Transfer Building Construction and Design
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	1. Building Energy Efficiency and Sustainability -- 2. Adaptive Thermal Comfort Models for Buildings -- 3. Application of Adaptive Thermal Comfort Models for Energy Saving in Buildings -- 4. Energy Savings Obtained with an Adaptive Approach -- 5. Decision Making to Apply Adaptive Approaches.
Sommario/riassunto	This book is structured in four parts: First, it analyzes the sustainability objectives established for the building stock and the importance of thermal comfort in this aspect. Second, the existing adaptive thermal comfort models and the main energy-saving measures associated with these models are analyzed. Third, the energy savings obtained with these measures are analyzed in several case studies, comparing the results obtained with other energy conservation measures, such as the improvement of the façade. The analysis is carried out from an energy and economic perspective. Finally, a decisionmaking process based on fuzzy logic is established. As an expected result, the content of the

book contributes to assist architects in designing more efficient buildings from the perspective of user behavior.
