Sommario/riassunto

'In this eminently sensible, practical and thought-provoking book, Jennifer Mackewn takes gestalt light years forwards towards a synthesis and integration of psychological styles and away from what she describes as ""Perlism"". I agree with her: this is a book for therapists, not principally for gestaltists... In inviting the reader to ""pick and choose"" from the many and varied, always practical, hands-on approach chapters... Jennifer Mackewn hopes we will both enjoy her book and find it of use. This reader, commending the book to you all, has no doubt that both her hopes will be fulfilled'

International Federation for Information Processing The IFIP series publishes state-of-the-art results in the sciences and technologies of information and communication. The scope of the series includes: foundations of computer science; software theory and practice; education; computer applications in technology; communication systems; systems modeling and optimization; information systems; computers and society; computer systems technology; security and protection in information processing systems; artificial intelligence; and human-computer interaction. Proceedings and post-proceedings of refereed international conferences in computer science and interdisciplinary fields are featured. These results often precede journal publication and represent the most current research. The principal aim of the IFIP series is to encourage education and the dissemination and exchange of information about all aspects of computing.
