1. Record Nr.   UNINA9910483497503321

   Titolo   Computational Logic in Multi-Agent Systems : 5th International
                      Workshop, CLIMA V, Lisbon, Portugal, September 29-30, 2004, Revised
                      Selected and Invited Papers / / edited by João Leite, Paolo Torroni

   Pubbl/distr/stampa Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer,
                      , 2005

   ISBN   9783540318576

   Edizione   [1st ed. 2005.]

   Descrizione fisica 1 online resource (XII, 284 p.)

   Collana   Lecture Notes in Artificial Intelligence ; ; 3487

   Disciplina   004.015113

   Soggetti   Artificial intelligence
                      Computer communication systems
                      Mathematical logic
                      Artificial Intelligence
                      Computer Communication Networks
                      Mathematical Logic and Formal Languages

   Lingua di pubblicazione Inglese

   Formato   Materiale a stampa

   Livello bibliografico Monografia

   Note generali   Bibliographic Level Mode of Issuance: Monograph

   Nota di bibliografia Includes bibliographical references and index.

   Nota di contenuto Foundations -- A Logic for Knowledge, Correctness, and Real Time --
                      Dynamic Logic for Plan Revision in Intelligent Agents -- Contextual
                      Taxonomies -- From Logic Programs Updates to Action Description
                      Updates -- Dynamic Logic Programming: Various Semantics Are Equal
                      on Acyclic Programs -- Architectures -- Declarative Agent Control --
                      Metareasoning for Multi-agent Epistemic Logics -- Graded BDI Models
                      for Agent Architectures -- Interaction -- Inferring Trust --
                      Coordination Between Logical Agents -- A Computational Model for
                      Conversation Policies for Agent Communication -- Verifying Protocol
                      Conformance for Logic-Based Communicating Agents -- Planning and
                      Applications -- An Application of Global Abduction to an Information
                      Agent Which Modifies a Plan Upon Failure – Preliminary Report --
                      Planning Partially for Situated Agents -- Desire-Space Analysis and
                      Action Selection for Multiple Dynamic Goals -- Organising Software in
                      Active Environments.

   Sommario/riassunto The notion of agency has recently increased its in?uence in the research

and - velopment of computational logic based systems, while at the same time sign- cantly gaining from decades of research in computational logic. Computational logic provides a well-de?ned, general, and rigorous framework for studying s- tax, semantics and procedures, for implementations, environments, tools, and standards, facilitating the ever important link between speci?cation and ver- cation of computational systems. The purpose of the Computational Logic in Multi-agent Systems (CLIMA) international workshop series is to discuss techniques, based on computational logic, for representing, programming, and reasoning about multi-agent systems in a formal way. Former CLIMA editions were conducted in conjunction with other major computational logic and AI events such as CL in July 2000, ICLP in December 2001, FLoC in August 2002, and LPNMR and AI-Math in January 2004. The ?fth edition of CLIMA was held Lisbon, Portugal, in September 29–30, 2004.We,asorganizers, andinagreementwiththeCLIMASteeringCommittee, opted for co-location with the 9th European Conference on Logics in Arti?cial Intelligence (JELIA 2004), wishing to promote the CLIMA research topics in the broader community of logics in AI, a community whose growing interest in multi-agent issues has been demonstrated by the large number of agent-related papers submitted to recent editions of JELIA. The workshop received 35 submissions – a sensible increase from the previous edition.

Thesubmittedpapersshowedthatthelogicalfoundationsofmulti-agent systems are felt by a large community to be a very important research topic, upon which classical AI and agent-related issues are to be addressed.
