

1. Record Nr.	UNINA9910483545403321
Titolo	Argumentation in multi-agent systems : fifth international workshop, ArgMAS 2008, Estoril, Portugal, May 12, 2008, revised selected and invited papers // Iyad Rahwan, Pavlos Moraitis (Eds.)
Pubbl/distr/stampa	Berlin ; ; Heidelberg, : Springer-Verlag, 2009
ISBN	3-642-00207-2
Edizione	[1st ed. 2009.]
Descrizione fisica	1 online resource (X, 237 p.)
Collana	Lecture Notes in Computer Science, , 0302-9743 ; ; 5384
Altri autori (Persone)	RahwanIyad MoraitisPavlos
Disciplina	006.3
Soggetti	Intelligent agents (Computer software) Logic
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Argument-Based Reasoning -- Personality-Based Practical Reasoning -- Argumentation Based Resolution of Conflicts between Desires and Normative Goals -- A Constrained Argumentation System for Practical Reasoning -- An Argumentation Framework Based on Strength for Ontology Mapping -- Contextual Extension with Concept Maps in the Argument Interchange Format -- Argumentation and Dialogue -- Command Dialogues -- Argumentation and Artifact for Dialogue Support -- Co-ordination and Co-operation in Agent Systems: Social Laws and Argumentation -- Annotation and Matching of First-Class Agent Interaction Protocols -- Strategic and Pragmatic Issues -- Argumentation- vs. Proposal-Based Negotiation: An Empirical Case Study on the Basis of Game-Theoretic Solution Concepts -- Argumentation-Based Information Exchange in Prediction Markets -- An Argumentative Approach for Modelling Coalitions Using ATL -- A Dialogue Mechanism for Public Argumentation Using Conversation Policies.
Sommario/riassunto	During the last decade Argumentation has been gaining importance within Artificial Intelligence especially in multi agent systems. Argumentation is a powerful mechanism for modelling the internal reasoning of an agent. It also provides tools for analysing, designing and implementing sophisticated forms of interaction among rational

agents, thus making important contributions to the theory and practice of multiagent dialogues. Application domains include: nonmonotonic reasoning, legal disputes, business negotiation, labor disputes, team formation, scientific inquiry, deliberative democracy, ontology reconciliation, risk analysis, scheduling, and logistics. This volume presents the latest developments in this area at the interface of argumentation theory and multi agent systems. The 10 revised full papers presented together with 3 invited papers from the AAMAS 2008 conference were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on argument-based reasoning, argumentation and dialogue, as well as strategic and pragmatic issues.
