1. Record Nr. UNINA9910483586803321

Titolo	Transactions on Large-Scale Data- and Knowledge-Centered Systems XIV / / edited by Abdelkader Hameurlain, Josef Küng, Roland Wagner
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2014
ISBN	3-662-45714-8
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (VII, 115 p. 41 illus.)
Collana	Transactions on Large-Scale Data- and Knowledge-Centered Systems, , 1869-1994 ; ; 8800
Disciplina	005.7565
Soggetti	Database management Information storage and retrieval Application software Data mining Database Management Information Storage and Retrieval Information Systems Applications (incl. Internet) Data Mining and Knowledge Discovery
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di contenuto	Reliable Aggregation over Prioritized Data Streams -- Slicing the Dimensionality: Top-k Query Processing for High-Dimensional Spaces -- SeeVa: A Model Based Framework for Semantic Web Service Discovery -- Maximal Set of XML Functional Dependencies for the Integration of Multiple Systems.
Sommario/riassunto	The LNCS journal Transactions on Large-Scale Data- and Knowledge-Centered Systems focuses on data management, knowledge discovery, and knowledge processing, which are core and hot topics in computer science. Since the 1990s, the Internet has become the main driving force behind application development in all domains. An increase in the demand for resource sharing across different sites connected through networks has led to an evolution of data- and knowledge-management systems from centralized systems to decentralized systems enabling large-scale distributed applications providing high scalability. Current

decentralized systems still focus on data and knowledge as their main resource. Feasibility of these systems relies basically on P2P (peer-to-peer) techniques and the support of agent systems with scaling and decentralized control. Synergy between grids, P2P systems, and agent technologies is the key to data- and knowledge-centered systems in large-scale environments. This, the 14th issue of Transactions on Large-Scale Data- and Knowledge-Centered Systems, contains four revised selected regular papers. Topics covered include data stream systems, top-k query processing, semantic web service (SWS) discovery, and XML functional dependencies.
