Record Nr.	UNINA9910483597703321
Autore	Wang Xiaochun
Titolo	New developments in unsupervised outlier detection : algorithms and applications / / Xiaochun Wang, Xiali Wang, Mitch Wilkes
Pubbl/distr/stampa	Singapore : , : Springer, , [2021] ©2021
ISBN	981-15-9519-4
Edizione	[1st ed. 2021.]
Descrizione fisica	1 online resource (XXI, 277 p. 138 illus., 120 illus. in color.)
Disciplina	006.312
Soggotti	Data mining
Soggetti	Outliers (Statistics)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Overview and Contributions Developments in Unsupervised Outlier Detection Research A Fast Distance-Based Outlier Detection Technique Using A Divisive Hierarchical Clustering Algorithm A k- Nearest Neighbour Centroid Based Outlier Detection Method A Minimum Spanning Tree Clustering Inspired Outlier Detection Technique A k-Nearest Neighbour Spectral Clustering Based Outlier Detection Technique Enhancing Outlier Detection by Filtering Out Core Points and Border Points An Effective Boundary Point Detection Algorithm via k-Nearest Neighbours Based Centroid A Nearest Neighbour Classifier Based Automated On-Line Novel Visual Percept Detection Method Unsupervised Fraud Detection in Environmental Time Series Data
Sommario/riassunto	This book enriches unsupervised outlier detection research by proposing several new distance-based and density-based outlier scores in a k-nearest neighbors' setting. The respective chapters highlight the latest developments in k-nearest neighbor-based outlier detection research and cover such topics as our present understanding of unsupervised outlier detection in general; distance-based and density-based outlier detection in particular; and the applications of the latest findings to boundary point detection and novel object detection. The book also offers a new perspective on bridging the gap between k-nearest neighbor-based outlier detection and clustering-

1.

based outlier detection, laying the groundwork for future advances in	
unsupervised outlier detection research. The authors hope the	
algorithms and applications proposed here will serve as valuable	
resources for outlier detection researchers for years to come.
