

1. Record Nr.	UNINA9910483675403321
Titolo	Theory and Applications of Satisfiability Testing - SAT 2010 [[electronic resource] ] : 13th International Conference, SAT 2010, Edinburgh, UK, July 11-14, 2010, Proceedings // edited by Ofer Strichman, Stefan Szeider
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2010
ISBN	1-280-38775-0 9786613565679 3-642-14186-2
Edizione	[1st ed. 2010.]
Descrizione fisica	1 online resource (XIII, 400 p. 74 illus.)
Collana	Theoretical Computer Science and General Issues, , 2512-2029 ; ; 6175
Disciplina	005.1
Soggetti	Algorithms Software engineering Computer programming Computer science Machine theory Computer science—Mathematics Software Engineering Programming Techniques Computer Science Logic and Foundations of Programming Formal Languages and Automata Theory Mathematics of Computing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1. Invited Talks -- The Big Deal: Applying Constraint Satisfaction Technologies Where It Makes the Difference -- Exact Algorithms and Complexity -- 2. Regular Papers -- Improving Stochastic Local Search for SAT with a New Probability Distribution -- Lower Bounds for Width-Restricted Clause Learning on Small Width Formulas -- Proof Complexity of Propositional Default Logic -- Automated Testing and Debugging of SAT and QBF Solvers -- Rewriting (Dependency-)

Quantified 2-CNF with Arbitrary Free Literals into Existential 2-HORN  
-- Synthesizing Shortest Linear Straight-Line Programs over GF(2)  
Using SAT -- sQueueBF: An Effective Preprocessor for QBFs Based on  
Equivalence Reasoning -- Non Uniform Selection of Solutions for Upper  
Bounding the 3-SAT Threshold -- Symmetry and Satisfiability: An  
Update -- A Non-prenex, Non-clausal QBF Solver with Game-State  
Learning -- SAT Solving with Reference Points -- Integrating  
Dependency Schemes in Search-Based QBF Solvers -- An Exact  
Algorithm for the Boolean Connectivity Problem for k-CNF --  
Improving Unsatisfiability-Based Algorithms for Boolean Optimization  
-- Encoding Techniques, Craig Interpolants and Bounded Model  
Checking for Incomplete Designs -- Statistical Methodology for  
Comparison of SAT Solvers -- On the Relative Merits of Simple Local  
Search Methods for the MAX-SAT Problem -- The Seventh QBF Solvers  
Evaluation (QBFEVAL'10) -- Complexity Results for Linear XSAT-  
Problems -- Bounds on Threshold of Regular Random k-SAT --  
Dynamic Scoring Functions with Variable Expressions: New SLS Methods  
for Solving SAT -- 3. Short Papers -- Improved Local Search for Circuit  
Satisfiability -- A System for Solving Constraint Satisfaction Problems  
with SMT -- Two Techniques for Minimizing Resolution Proofs -- On  
Moderately Exponential Time for SAT -- Minimising Deterministic Büchi  
Automata Precisely Using SAT Solving -- Exploiting Circuit  
Representations in QBF Solving -- Reconstructing Solutions after  
Blocked Clause Elimination -- An Empirical Study of Optimal Noise and  
Runtime Distributions in Local Search -- Green-Tao Numbers and SAT  
-- Exact MinSAT Solving -- Uniquely Satisfiable k-SAT Instances with  
Almost Minimal Occurrences of Each Variable -- Assignment Stack  
Shrinking -- Simple but Hard Mixed Horn Formulas -- Zero-One  
Designs Produce Small Hard SAT Instances.
