Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	1. What is Energy Law? -- 2. International, National and Local Energy Law -- 3. Issues in Energy Law -- 4. Energy Law Research and Conclusions.
Sommario/riassunto	The aim of this short text is simply to introduce a reader to this topic. It is intended for a global audience and rather than being restricted to potential energy law students of a particular country. It is also written for students of other disciplines such as geographers, social scientists and engineers. It should also be engaging to those in a variety of professional practices who want an accessible background to and overview of the subject. The text aims to outline the principles and central logic behind energy law. Therefore, readers from across the world should be able to use it as a guide to thinking about energy law in their own countries. A variety of examples from many different countries are included in the text and while examples and comparisons

are mainly from the EU and US, they represent good examples of more advanced and innovative energy law. For those readers who seek further or more in-depth knowledge, this text will only serve as an introduction. However, a key focus of the book is to direct the reader where they to look for further information and within the book there are suggested extra readings, the key recommended journals to read and other sources of information based on institutions who publish further material in this area. The aim of the Energy Law: An Introduction is to introduce new readers to the developing area of energy law. The hope is that it provides an introduction to the legal challenges faced in the energy sector and the potential contribution of energy law to delivering a better world for future generations.
