JacodJean

Disciplina 519.2

Soggetti Branching processes

Levy processes
Trees (Graph theory)

Lingua di pubblicazione Inglese

Formato Materiale a stampa

Livello bibliografico Monografia

Note generali "With a short biography of Paul Levy by Jean Jacod".

Nota di bibliografia Includes bibliographical references and index.

Nota di contenuto Fractional Integrals and Extensions of Selfdecomposability -- Packing

and Hausdorff Measures of Stable Trees -- Numerical Analysis of

Additive, Lévy and Feller Processes with Applications to Option Pricing.

Sommario/riassunto This is the first volume of a subseries of the Lecture Notes in

Mathematics which will appear randomly over the next years. Each volume will describe some important topic in the theory or applications of Lévy processes and pay tribute to the state of the art of this rapidly evolving subject with special emphasis on the non-Brownian world. The three expository articles of this first volume have been chosen to reflect the breadth of the area of Lévy processes. The first article by Ken-iti Sato characterizes extensions of the class of selfdecomposable distributions on R^d. The second article by Thomas Duquesne discusses Hausdorff and packing measures of stable trees. The third

article by Oleg Reichmann and Christoph Schwab presents numerical solutions to Kolmogoroff equations, which arise for instance in financial engineering, when Lévy or additive processes model the dynamics of the risky assets.
