

1. Record Nr.	UNINA9910484000003321
Autore	Bremner John
Titolo	Multiple action-based design approaches to antibacterials // John Bremner
Pubbl/distr/stampa	Singapore : , : Springer, , [2021] ©2021
ISBN	981-16-0999-3
Descrizione fisica	1 online resource (xiii, 193 pages) : illustrations
Disciplina	616.92061
Soggetti	Antibacterial agents
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- Preface -- Contents -- About the Author -- 1 Antibacterials -- 1.1 Bacteria -- 1.2 Antibacterial Action -- 1.3 Bacterial Resistance to Antibacterials -- 1.3.1 Introduction to Key Resistance Mechanisms -- 1.3.2 Resistance and Resilience -- 1.3.3 The Gram-Negative Challenge -- 1.3.4 Other Survival Strategies -- 1.4 Approaches to Meeting Needs -- 1.5 Ways to Achieve Multi-action Effects -- 1.6 Bacterial Over Host Selectivity -- References -- 2 Antibacterial Combinations -- 2.1 Introduction -- 2.1.1 Dual Combinations Resulting in Two Actions -- 2.1.2 Dual Combinations Resulting in Three or More Actions -- 2.1.3 Triple Combinations Resulting in Three or More Actions -- 2.1.4 Quadruple Combinations with Four or More Actions -- 2.1.5 Pentuple Combinations -- 2.2 Summary -- References -- 3 Single Molecule Non-cleavable Multiply Active Antibacterials -- 3.1 Introduction to General Design Considerations -- 3.1.1 General Approaches to Hybrids -- 3.1.2 Factors in Antibacterial Hybrid Design -- 3.2 Designing for Mainly Dual Activity -- 3.2.1 Dual Action Antibacterial Hybrids -- 3.2.2 Examples of Dual Action Agents from Nature -- 3.2.3 Berberine as a Starting Point for Design -- 3.3 Triple Action Antibacterial Hybrid Agents -- 3.3.1 General Points -- 3.3.2 Potential Design Based on Pharmacophoric Elements -- 3.3.3 Established and Potential Single Molecule Triple Action or Interaction Agents -- 3.3.4 Designing Potential New Non-cleavable Triple Action Agents -- 3.4 More Than Triple Action Hybrid Agents -- References --

4 Design Principles and Development of Prodrugs for Multiply Active Antibacterials -- 4.1 Definitions -- 4.1.1 Carrier-Linked Prodrugs (Carrier Prodrugs) -- 4.1.2 Bioprecursor Prodrugs -- 4.2 Introduction to Prodrugs for Triple or Higher Action Antibacterials -- 4.2.1 Design Considerations.  
4.2.2 Classification and Examples of Cleavable Types for Triple or Higher Action -- 4.2.3 Cleavable Type I -- 4.2.4 Cleavable Type II -- 4.2.5 Cleavable Type III -- 4.2.6 Cleavable Type IV -- 4.3 Release Mechanisms and Prodrug Design -- 4.3.1 Biological -- 4.3.2 Chemical -- 4.3.3 Physical -- 4.4 Metabolism Activated Multi-targeting -- 4.5 Conclusion -- References -- 5 Future Possibilities -- 5.1 Introduction -- 5.2 New Combinations and Single Molecules with Multi-activity Development Potential -- 5.2.1 Combinations -- 5.2.2 Hybrid Molecule Possibilities -- 5.3 Search for Different Chemical Structure Types -- 5.3.1 In Silico Advances -- 5.4 New Modes of Action/New Targets -- 5.5 DNA and RNA Level Modulation -- 5.6 Proteins and Antibacterials -- 5.7 Concluding Remarks -- References -- Index.
