Business Planning -- Chapter 12. Research Methods for Health Services Planning -- Chapter 13. Information Sources and Data Management -- Chapter 14. The Future of Health Services Planning.
Sommario/riassunto	The third edition of Health Services Planning represents a necessary revision of the second edition (2003) and reflects the significant changes that have occurred in the social and health environments, the healthcare field, and the planning endeavor itself. The book reviews the history of health planning (with reference to activities in other countries) before describing the process from start to finish in great detail. The philosophy underlying health planning and its perception, past and present, are reviewed with a particular emphasis on the factors that are making health planning more relevant than ever. The steps in the health services planning process are reviewed and supported by how-to guidance, examples of planning applications, and planning case studies. The various levels and types of planning are

described (societal, community, organizational; strategic, business, marketing), and the similarities and differences discussed. New and updated chapters in this edition cover the planning requirements introduced through the Affordable Care Act, the rethinking of the community health needs assessment process, and the implications of the population health movement for health planning: The Social and Health Systems Context for Health Services Planning The Changing Environment for Health Planning The New Community Assessment Process From Community Health Needs Assessment to Population Health Assessment Health Services Planning, 3rd Ed., remains a critical resource for health administration programs, as well as an essential publication for health professionals in both public and private sector healthcare organizations that need to have an understanding of the planning process. .

Sommario/riassunto	Part of the popular Networked Cities series, Urban and Regional Technology Planning focuses on the practice of relational planning and the stimulation of local city-regional scale development planning in the context of the global knowledge economy and network society. Designed to offer scholars, practitioners, and decision makers studies on the ways of cities, technologies, and multiple forms of urban movement intersect and create the contemporary urban environment, Kenneth Corey and Mark Wilson explore the dynamics of technology-induced change that is taking place within the
