Sommario/riassunto

This book focuses on applied behavior analysis (ABA) treatment of violence and aggression in persons with neurodevelopmental disabilities. It details ABA theory and concepts leading to empirical treatment procedures that can be implemented successfully across diverse treatment settings. Further, the book examines contemporary approaches to functional behavioral assessment (FBA) and functional analysis (FA) in determining the environmental conditions responsible for violence and aggression. In addition, the volume describes several evidence-supported treatment procedures that encompass antecedent-control, contingency management, cognitive-behavior therapy, and physical intervention components. It addresses effective strategies for training and supervising care providers, including behavioral skills training (BST), posttraining performance management, and mindfulness. Finally, the book presents recommendations that guide effective and socially valid research-to-practice translation. Applied Behavior Analysis Treatment of Violence and Aggression in Persons with Neurodevelopmental Disabilities is an essential resource for researchers, clinicians/therapists, and upper-level undergraduate and graduate students in forensic psychology, public health, criminology/criminal justice, and behavioral therapy and rehabilitation.
