

1. Record Nr.	UNINA9910484209503321
Titolo	Nonlinear and optimal control theory : lectures given at the C.I.M.E. Summer School held in Cetraro, Italy, June 19-29, 2004 / / Andrei A. Agrachev ... [et al.] ; editors, Paolo Nistri, Gianna Stefani
Pubbl/distr/stampa	Berlin, : Springer, c2008
ISBN	9783540776536 3540776532
Edizione	[1st ed. 2008.]
Descrizione fisica	1 online resource (XIV, 360 p. 78 illus.)
Collana	Lecture notes in mathematics, , 0075-8434 ; ; 1932
Altri autori (Persone)	AgrachevAndrei A NistriPaolo StefaniGianna
Disciplina	629.8/36
Soggetti	Nonlinear control theory Mathematical optimization
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"Fondazione CIME."
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Geometry of Optimal Control Problems and Hamiltonian Systems -- Lecture Notes on Logically Switched Dynamical Systems -- Input to State Stability: Basic Concepts and Results -- Generalized Differentials, Variational Generators, and the Maximum Principle with State Constraints -- Sliding Mode Control: Mathematical Tools, Design and Applications.
Sommario/riassunto	The lectures gathered in this volume present some of the different aspects of Mathematical Control Theory. Adopting the point of view of Geometric Control Theory and of Nonlinear Control Theory, the lectures focus on some aspects of the Optimization and Control of nonlinear, not necessarily smooth, dynamical systems. Specifically, three of the five lectures discuss respectively: logic-based switching control, sliding mode control and the input to the state stability paradigm for the control and stability of nonlinear systems. The remaining two lectures are devoted to Optimal Control: one investigates the connections between Optimal Control Theory, Dynamical Systems and Differential Geometry, while the second presents a very general version, in a non-smooth context, of the Pontryagin Maximum Principle. The arguments

of the whole volume are self-contained and are directed to everyone working in Control Theory. They offer a sound presentation of the methods employed in the control and optimization of nonlinear dynamical systems.
