

1. Record Nr.	UNINA990007596590403321
Autore	Martellato, Dino
Titolo	Le disparità multiregionali come equilibrio non walrasiano / Dino Martellato

Descrizione fisica	p. 65-82
--------------------	----------

Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNINA9910484216103321
Titolo	Methods of Contemporary Mathematical Statistical Physics / / by Marek Biskup, Anton Bovier, Frank den Hollander, Dima Ioffe, Fabio Martinelli, Karel Netocný, Christina Toninelli ; edited by Roman Kotecký
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2009
ISBN	9786613562210 9781280384295 1280384298 9783540927969 3540927964
Edizione	[1st ed. 2009.]
Descrizione fisica	1 online resource (X, 350 p. 17 illus.)
Collana	Lecture Notes in Mathematics, , 1617-9692 ; ; 1970
Altri autori (Persone)	BiskupMarek KoteckýR (Roman)
Disciplina	530.15
Soggetti	Probabilities Mathematical physics Mechanics, Applied Solids Statistics Probability Theory Theoretical, Mathematical and Computational Physics Solid Mechanics Statistics in Engineering, Physics, Computer Science, Chemistry and Earth Sciences

Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Reflection Positivity and Phase Transitions in Lattice Spin Models -- Stochastic Geometry of Classical and Quantum Ising Models -- Localization Transition in Disordered Pinning Models -- Metastability -- Three Lectures on Metastability Under Stochastic Dynamics -- A Selection of Nonequilibrium Issues -- Facilitated Spin Models: Recent and New Results.
Sommario/riassunto	This volume presents a collection of courses introducing the reader to the recent progress with attention being paid to laying solid grounds and developing various basic tools. An introductory chapter on lattice spin models is useful as a background for other lectures of the collection. The topics include new results on phase transitions for gradient lattice models (with introduction to the techniques of the reflection positivity), stochastic geometry reformulation of classical and quantum Ising models, the localization/delocalization transition for directed polymers. A general rigorous framework for theory of metastability is presented and particular applications in the context of Glauber and Kawasaki dynamics of lattice models are discussed. A pedagogical account of several recently discussed topics in nonequilibrium statistical mechanics with an emphasis on general principles is followed by a discussion of kinetically constrained spin models that are reflecting important peculiar features of glassy dynamics.
