Sommario/riassunto	En réponse à une croissance soutenue des enjeux environnementaux, les demandes de la part des instances, des associations, des institutions d'enseignement et surtout, des étudiants pour des cours soit sur l'environnement soit qui intègrent les problématiques environnementales. La demande étudiante notamment dépasse, en effet, l'offre des programmes dans trop de nos institutions d'enseignement. Les changements climatiques, la crise de l'eau, les déchets et la pollution font dorénavant de l'enseignement relatif à l'environnement une nécessité de plus en plus urgente. Ce livre, un des premiers en langue française dans ce domaine, réunit une équipe internationale et multidisciplinaire d'enseignants-chercheurs issue des sciences sociales. Il offre des activités, des méthodes et des cours complets aux enseignants pour former les apprenants aux problématiques de l'environnement et du développement durable. Il vise à contribuer à la constitution de cursus pluridisciplinaires sur la question environnementale en cours dans nos universités. Les activités décrites ici ont toutes fait leur preuve dans des conditions d'enseignement réelles et elles sont présentées de telle sorte que l'enseignant puisse les reproduire et les utiliser en classe.

Nota di contenuto	INTRODUCTION 1 -- CHAPTER 1: Themes and Schemes: A Prelude -- CHAPTER 2: At the Beginning and End of Life -- CHAPTER 3: Dialogue and Trust -- CHAPTER 4 Opening into Clinical Ethics -- CHAPTER 5 Voices and Time -- CHAPTER 6: Responsibility in Clinical Ethics Consultation -- CHAPTER 7 Clinical Listening, Narrative Writing -- CHAPTER 8: Visions and Re-Visions: Life and the Accident of Birth.
Sommario/riassunto	This book is a critical examination of certain basic issues and themes crucial to understanding how ethics currently interfaces with health care and biomedical research. Beginning with an overview of the field, it proceeds through a delineation of such key notions as trust and uncertainty, dialogue involving talk and listening, the vulnerability of the patient against the asymmetric power of the health professional, along with professional and individual responsibility. It emphasizes several themes fundamental to ethics and health care: (1) the work of ethics requires strict focus on the specific situational understanding of each involved person. (2) Moral issues, at least those intrinsic to each clinical encounter, are presented solely within the contexts of their actual occurrence; therefore, ethics must not only be practical but

empirical in its approach. (3) Each particular situation is in its own way imprecise and uncertain, and the different types and dimensions of imprecision and uncertainty are critical for everyone involved. (4) Finally, medicine and health care more broadly are governed by the effort to make sense of the healer's experiences with the patient, whose own experiences and interpretations are ingredient to what the healer seeks to understand and eventually treat. In addition to providing a way to develop ethical considerations in clinical life and research projects, the book proposes that narratives provide the finest way to state and grapple with these themes and issues, whether in classrooms or real-life situations. It concludes with a prospective analysis of newly emerging issues presented by and within the new genetics, which, together within a focus on the phenomenon of birth, leads to a clearer understanding of human life.
