

1. Record Nr.	UNINA9910484232103321
Titolo	Symplectic 4-manifolds and algebraic surfaces : lectures given at the C. I.M.E. Summer School held in Cetraro, Italy, Italy, September 2-10, 2003 // Denis Auroux ... [et al.] ; editors, Farizio Catanese, Gang Tian
Pubbl/distr/stampa	Berlin, : Springer, 2008
ISBN	9783540782797 3540782796
Edizione	[1st ed. 2008.]
Descrizione fisica	1 online resource (XIV, 354 p. 15 illus.)
Collana	Lecture notes in mathematics, , 0075-8434 ; ; 1938
Altri autori (Persone)	AurouxDenis CataneseF (Fabrizio) TianGang <1958->
Disciplina	516.3/52
Soggetti	Surfaces, Algebraic Symplectic manifolds Symplectic geometry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Lefschetz Pencils, Branched Covers and Symplectic Invariants -- Differentiable and Deformation Type of Algebraic Surfaces, Real and Symplectic Structures -- Smoothings of Singularities and Deformation Types of Surfaces -- Lectures on Four-Dimensional Dehn Twists -- Lectures on Pseudo-Holomorphic Curves and the Symplectic Isotopy Problem.
Sommario/riassunto	Modern approaches to the study of symplectic 4-manifolds and algebraic surfaces combine a wide range of techniques and sources of inspiration. Gauge theory, symplectic geometry, pseudoholomorphic curves, singularity theory, moduli spaces, braid groups, monodromy, in addition to classical topology and algebraic geometry, combine to make this one of the most vibrant and active areas of research in mathematics. It is our hope that the five lectures of the present volume given at the C.I.M.E. Summer School held in Cetraro, Italy, September 2-10, 2003 will be useful to people working in related areas of mathematics and will become standard references on these topics. The volume is a coherent exposition of an active field of current research

focusing on the introduction of new methods for the study of moduli spaces of complex structures on algebraic surfaces, and for the investigation of symplectic topology in dimension 4 and higher.
