

1. Record Nr.	UNINA9910484251903321
Titolo	Climate Impacts on Water Resources in India : Environment and Health / / edited by Ashish Pandey, S.K. Mishra, M.L. Kansal, R.D. Singh, V.P. Singh
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2021
ISBN	3-030-51427-7
Edizione	[1st ed. 2021.]
Descrizione fisica	1 online resource (393 pages)
Collana	Water Science and Technology Library, , 1872-4663 ; ; 95
Disciplina	363.738740954
Soggetti	Water Hydrology Environmental health Environmental monitoring Bioclimatology Refuse and refuse disposal Environmental Health Environmental Monitoring Climate Change Ecology Waste Management/Waste Technology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Foreword -- Preface -- 1. Water Pollution and Water Quality Assessment, Environmental Flows -- 2. Water Treatment Technologies and Management -- 3. Climate Change and Climate Variability -- 4. Water and Human Health Issues -- 5. Conclusions. .
Sommario/riassunto	This book chiefly focuses on environmental flow, water pollution and water quality. Several chapters also cover water treatment technologies and management. In today's context, climate change and climate variability are important issues in the water sector, which is called upon to develop adaptation strategies to cope with their negative impacts. Human health depends upon the quality of water used for drinking and irrigation purposes. These core issues are discussed and addressed in

several chapters. The book explores the impact of climate change on water resources and considers various climatological scenarios. In this regard, it carries out a trend analysis and compares the performance of various Global Climate Models (GCMs). Further, it conducts a water quality analysis and water quality mapping so as to provide information on the most vulnerable areas in the context of water quality. Emerging pollutants, generated from paper mills, are identified in order to choose an appropriate treatment technology. Bioremediation techniques are included for the characterization of improved water quality parameters. The book also presents a low-cost treatment technology for fluoride removal, which can help water managers ensure potable water to stakeholders. In terms of maintaining river ecology in the downstream areas of water resources project sites, the book provides a number of case studies on assessment of environmental flows. Advanced treatment technologies that can be highly advantageous for removing water pollutants are presented. Given its scope, the book offers a valuable resource for academics, water resources practitioners, scientists, water managers, environmentalists, administrators, NGOs, researchers and students who are involved in water management with a main focus on water pollution, the environment, climate change and health. .
