Nota di contenuto	Chapter One: The concept of "big finance" and the national policy of a strong RMB - A policy study of the top-level design and layout of Chinese finance -- Chapter Two: The "twin-peak" model for financial regulation - A review of financial regulatory and coordinating measures in China -- Chapter Three: Local economic development and financial support - A study of Chinese financial hierarchy -- Chapter Four: The establishment of an onshore transaction clearing center for RMB offshore business - Explorations in the interactive model for internal and external finance -- Chapter Five: The settlement of "carbon emissions trading" in RMB - Explorations in China's pathway of "overtaking on the curve" in finance.-Chapter Six: The present and future of China's internet finance - The trend of FinTech innovation in China -- Chapter Seven: The prevention and diffusion of systematic or regional financial risks -The methodology for China to resolve financialcrises -- Chapter Eight: Innovation and improvement of the international financial architecture - China's plan for engagement in international finance.

"National finance" is a new concept launched by the author in his book *National Finance A Chinese Perspective*, a unique monograph that differs from other financial publications dealing with general topics in public finance. The monograph intends to provide a full, well-developed and macro-level exposition of all major aspects of finance from the perspective of the central government, with focus laid on the most essential, immediate and intricate issues in national financial development, which are the "hard nuts" that have to be cracked on both central and regional levels and on the fronts of both offshore and onshore finance. It attempts to cope with a series of formidable challenges that a country, particularly its top government officials, must take in developing finance: how national finance should develop and overtake in the face of rising financial industries, how it should respond to the influx of AI+blockchain technologies, how a country guards against and copes with systematic or regional financial risks with security, fluidity and profitability serving as its cornerstones, how it can build up and promote the new international financial system and governance amid international financial powers around the world, and so on. Yunxian Chen is a well-known economist and financial expert in China. He was awarded a doctoral degree in economics by Peking University. He founded GF Securities and later worked in various administrative posts, as Executive Deputy Mayor and Mayor of Foshan Municipality Government in Guangdong Province, Secretary of the Communist Party Committee of Foshan City and Chairman of the Municipal People's Congress of Foshan, and Deputy Governor of Guangdong Provincial Government. He is now guest professor and doctoral supervisor at Peking University and Sun Yat-sen University, China.
