Sommario/riassunto	<p>Traveling to archives in Tunisia, Morocco, France, and England, with visits to Egypt, Jordan, Lebanon, and Spain, Nabil Matar assembles a rare history of Europe's rise to power as seen through the eyes of those who were later subjugated by it. Many historians of the Middle East believe Arabs and Muslims had no interest in Europe during this period of Western discovery and empire, but in fact these groups were very much engaged with the naval and industrial development, politics, and trade of European Christendom. Beginning in 1578 with a major Moroccan victory over a Portuguese invading army, Matar surveys this early modern period, in which Europeans and Arabs often shared common political, commercial, and military goals. Matar concentrates on how Muslim captives, ransomers, traders, envoys, travelers, and rulers pursued those goals while transmitting to the nonprint cultures of North Africa their knowledge of the peoples and societies of Spain, France, Britain, Holland, Italy, and Malta. From the first non-European description of Queen Elizabeth I to early accounts of Florence and Pisa in Arabic, from Tunisian descriptions of the Morisco expulsion in 1609 to the letters of a Moroccan Armenian ambassador in London, the translations of the book's second half draw on the popular and elite sources that were available to Arabs in the early modern period. Letters from male and female captives in Europe, chronicles of European naval attacks and the taqayid (newspaper) reports on Muslim resistance, and descriptions of opera and quinine appear here in English for the first time. Matar notes that the Arabs of the Maghrib and the Mashriq were eager to engage Christendom, despite wars and rivalries, and hoped to establish routes of trade and alliances through treaties and royal marriages. However, the rise of an intolerant and exclusionary Christianity and the explosion of European military technology brought these advances to an end. In conclusion, Matar details the decline of Arab-Islamic power and the rise of Britain and France.</p>

Sommario/riassunto

The commercial exploitation of distributed computing technologies is slowly starting to become popular under the general area of cloud computing. These solutions allow selling and buying of resources (i.e., computing, network, software, and data resources) on demand. Existing solutions in this area are diverse, ranging from Infrastructure-as-a-Service (IaaS) models via Platform-as-a-Service (PaaS) to Software-as-a-Service (SaaS) models. Although the economics of these services is not yet fully understood and the interoperability between such services is still lacking, a common market for computing services is slowly developing. Such a market would allow buyers and sellers of computing services to trade their excess capacity or make available their capacity at a cost. However, it is still not possible for a market participant to act as a resource provider or seller, or trade based on the current level of demand. Another example of a developing open market is the emergence of Web2.0-based services. These enable consumers to create new services by aggregating services from multiple providers. The benefit of these solutions is that “value” can be created by combining services at different prices.
