Sommario/riassunto

This book constitutes the proceedings of the Third International Conference on Information Theoretic Security, held in Calgary, Canada, in August 2008. The 14 papers presented in this volume were carefully reviewed and selected from 43 submissions. There were nine invited speeches to the conference. The topics covered are secure and reliable communication; quantum information and communication; networks and devices; multiparty computation; information hiding and tracing; coding theory and security; quantum computation; foundation; and encryption.

Sommario/riassunto

This collection of articles is the result of an interdisciplinary Medieval Studies conference held at the University of Sheffield in 2009. Brutality and aggression were a stark reality of everyday life in the Middle Ages; from individual rebellions through family feuds to epic wars, a history of medieval warfare could easily be read as a history of medieval violence. This volume goes beyond such an analysis by illustrating just how pervasive the nature of war could be, influencing not only me...
