An in-depth description of the state-of-the-art of 3D shape analysis techniques and their applications. This book discusses the different topics that come under the title of "3D shape analysis". It covers the theoretical foundations and the major solutions that have been presented in the literature. It also establishes links between solutions proposed by different communities that studied 3D shape, such as mathematics and statistics, medical imaging, computer vision, and computer graphics. The first part of 3D Shape Analysis: Fundamentals, Theory, and Applications provides a review of the background concepts such as methods for the acquisition and representation of 3D geometries, and the fundamentals of geometry and topology. It specifically covers stereo matching, structured light, and intrinsic vs. extrinsic properties of shape. Parts 2 and 3 present a range of mathematical and algorithmic tools (which are used for e.g., global descriptors, keypoint detectors, local feature descriptors, and algorithms) that are commonly used for the detection, registration, recognition, classification, and retrieval of 3D objects. Both also place strong emphasis on recent techniques motivated by the spread of commodity devices for 3D acquisition. Part 4 demonstrates the use of these techniques in a selection of 3D shape analysis applications. It covers 3D face recognition, object recognition in 3D scenes, and 3D shape retrieval. It also discusses examples of semantic applications and cross domain 3D retrieval, i.e. how to retrieve 3D models using various types of modalities, e.g. sketches and/or images. The book concludes with a summary of the main ideas and discussions of the future trends. 3D Shape Analysis: Fundamentals, Theory, and Applications is an excellent reference for graduate students, researchers, and professionals in different fields of mathematics, computer science, and engineering. It is also ideal for courses in computer vision and computer graphics, as well as for those seeking 3D industrial/commercial solutions.

Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	1. Introductory remarks -- 2. Transborder investigations and interferences with fundamental rights. Problems and human rights challenges -- 3. Solution models for setting fair procedures of obtaining transnational evidence after the Lisbon Treaty -- 4. Multicultural criminal offences and fairness of transborder investigative procedures -- 5. Conclusions.
Sommario/riassunto	This book deals with human rights in European criminal law after the Lisbon Treaty. Doubtless the Lisbon Treaty has constituted a milestone in the development of European criminal justice. Not only has the reform following the Treaty given binding force to the EU Charter of Fundamental Rights, but furthermore it has paved the way for unprecedented forms of supranational legislation. In this scenario, the enforcement of individual rights in criminal matters has become a core goal of EU legislation. Alongside these developments, new interactions

between national and supranational jurisprudences have emerged, which have significantly contributed to a human rights-oriented approach to European criminal law. The book analyses the main developments of this complex phenomenon from an interdisciplinary perspective. Criminal and procedural law, constitutional law and comparative law must thus be combined to achieve a full understanding of these developments and of their impact on national law.
