1. Record Nr.   UNINA9910484427703321

Titolo   Information Security and Cryptology : 9th International Conference,
                    Inscrypt 2013, Guangzhou, China, November 27-30, 2013, Revised
                    Selected Papers / / edited by Dongdai Lin, Shouhuai Xu, Moti Yung

Pubbl/distr/stampa Cham : , : Springer International Publishing : , : Imprint : Springer, ,
                    2014

ISBN   3-319-12087-5

Edizione   [1st ed. 2014.]

Descrizione fisica 1 online resource (XIII, 408 p. 51 illus.)

Collana   Security and Cryptology ; ; 8567

Disciplina   005.82

Soggetti   Data protection
                    Cryptography
                    Data encryption (Computer science)
                    Coding theory
                    Information theory
                    Algorithms
                    Data and Information Security
                    Cryptology
                    Coding and Information Theory

Lingua di pubblicazione   Inglese

Formato   Materiale a stampa

Livello bibliografico   Monografia

Note generali   Bibliographic Level Mode of Issuance: Monograph

Nota di contenuto   Boolean Function and Block Cipher -- Sequence and Stream Cipher --
                    Applications: Systems and Theory -- Computational Number Theory --
                    Public Key Cryptography -- Hash Function -- Side-Channel and
                    Leakage -- Application and System Security.

Sommario/riassunto This book constitutes the thoroughly refereed post-conference
                    proceedings of the 9th International Conference on Information
                    Security and Cryptology, Inscrypt 2013, held in Guangzhou, China, in
                    November 2013. The 21 revised full papers presented together with 4
                    short papers were carefully reviewed and selected from 93
                    submissions. The papers cover the topics of Boolean function and block
                    cipher, sequence and stream cipher, applications: systems and theory,
                    computational number theory, public key cryptography, has function,
                    side-channel and leakage, and application and system security.
