1.	Record Nr.	UNINA9910484437303321
	Titolo	Transactions on Large-Scale Data- and Knowledge-Centered Systems XXV [[electronic resource] /] / edited by Abdelkader Hameurlain, Josef Küng, Roland Wagner
	Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2016
	ISBN	3-662-49534-1
	Edizione	[1st ed. 2016.]
	Descrizione fisica	1 online resource (IX, 187 p. 61 illus. in color.)
	Collana	Transactions on Large-Scale Data- and Knowledge-Centered Systems, , 1869-1994 ; ; 9620
	Disciplina	005.74
	Soggetti	Information storage and retrieval
		Database management
		Data mining
		Artificial intelligence
		Application software
		Algorithms
		Information Storage and Retrieval
		Database Management
		Data Mining and Knowledge Discovery
		Artificial Intelligence
		Information Systems Applications (incl. Internet)
		Algorithm Analysis and Problem Complexity
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Bibliographic Level Mode of Issuance: Monograph
	Nota di contenuto	On Expedited Rating of Data Stores -- A Theoretical and Experimental Comparison of Filter-Based Equijoins in MapReduce -- Constraint Optimization Method for Large-Scale Distributed View Selection -- On the Selection of SPARQL Endpoints to Efficiently Execute Federated SPARQL Queries -- YAM: A Step Forward for Generating a Dedicated Schema Matcher.
	Sommario/riassunto	The LNCS journal Transactions on Large-Scale Data- and Knowledge-Centered Systems focuses on data management, knowledge discovery,

and knowledge processing, which are core and hot topics in computer science. Since the 1990s, the Internet has become the main driving force behind application development in all domains. An increase in the demand for resource sharing across different sites connected through networks has led to an evolution of data- and knowledge-management systems from centralized systems to decentralized systems enabling large-scale distributed applications providing high scalability. Current decentralized systems still focus on data and knowledge as their main resource. Feasibility of these systems relies basically on P2P (peer-to-peer) techniques and the support of agent systems with scaling and decentralized control. Synergy between grids, P2P systems, and agent technologies is the key to data- and knowledge-centered systems in large-scale environments. <.
