Sommario/riassunto

The book contributes to the growing literature pertaining to empirical and policy issues in international trade, foreign capital flows and issues in finance, implications for India and emerging economies related to trade and development interface, and analysis of sector level growth and development in India. Further, the focus is on the policy aspects of these themes and their role in fostering economic development in the context of India and other emerging market economies. The discourse focuses mainly on empirical work and econometric details. The relevant issues are investigated using state of the art techniques such as gravity models, panel co-integration, generalized hyperbolic distributions, SEM, FMOLS and Probit models. In addition, detailed literature survey, discussions on data availability, issues related to statistical estimation techniques and a theoretical background, ensure that each chapter significantly contributes to the ever-growing literature on international trade and capital flows. The readers shall find an engaging dialogue on the crucial role played by policy and the trade-capital flows-growth experience of emerging economies. The book is relevant for those who are interested in contemporary issues in trade, growth and finance as well as for students of advanced econometrics who may benefit from the analytical and econometric exposition. The empirical evidences provided here could serve as ready reference for academicians, researchers and policy makers, particularly in emerging economies facing similar challenges.
