Diagnostic System for Malingered PTSD Disability/ Dysfunction and Related Negative Response Biases: User Version and Worksheet -- 28. Table 2. Diagnostic System for Malingered Neurocognitive Disability/ Dysfunction and Related Negative Response Biases -- 29. Table 3. Diagnostic System for Malingered Pain Disability/ Dysfunction and Related Negative Response Biases -- Section VI: Terms, Education, Study -- 30. Glossary and Discussion of Terms -- 31. Education -- 32. Study Guide Questions, Teaching Objectives, and Learning Outcomes -- 33. PTSD and Malingering: Tests, Diagnostics, Cut-Scores, Cautions -- 34. Book Conclusions .

Sommario/riassunto

This book is a comprehensive analysis of the definitions, concepts, and recent research on malingering, feigning, and other response biases in psychological injury/ forensic disability populations. It presents a new model of malingering and related biases, and develops a “diagnostic” system based on it that is applicable to PTSD, chronic pain, and TBI. Included are suggestions for effective practice and future research based on the literature reviews and the new systems, which are useful also because they can be used readily by psychiatrists as much as psychologists.
