

1. Record Nr.	UNINA9910484511903321
Titolo	Data Management in Grid and Peer-to-Peer Systems : Third International Conference, Globe 2010, Bilbao, Spain, September 1-2, 2010, Proceedings / / edited by Abdelkader Hameurlain, Franck Morvan, A Min Tjoa
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2010
ISBN	1-280-38830-7 9786613566225 3-642-15108-6
Edizione	[1st ed. 2010.]
Descrizione fisica	1 online resource (X, 161 p. 56 illus.)
Collana	Information Systems and Applications, incl. Internet/Web, and HCI, , 2946-1642 ; ; 6265
Altri autori (Persone)	HameurlainAbdelkader MorvanFranck TjoaA Min
Disciplina	005.7
Soggetti	Computer networks Database management Software engineering Application software Information storage and retrieval systems Computer Communication Networks Database Management Software Engineering Computer and Information Systems Applications Information Storage and Retrieval
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Data Storage and Management -- High Throughput Data-Compression for Cloud Storage -- Merging File Systems and Data Bases to Fit the Grid -- Multidimensional Arrays for Warehousing Data on Clouds -- Replication, Caching and Security -- Continuous Timestamping for Efficient Replication Management in DHTs -- A Catalog-Based Caching

Strategy for Structured P2P Systems -- Secure Routing Strategies in DHT-Based Systems -- Data Placement and Performance Evaluation -- Data Life Time for Different Placement Policies in P2P Storage Systems -- Performance Evaluation of WebRowSet Implementations -- P2PIRB: Benchmarking Framework for P2PIR -- Verification of General and Cyclic Covering Arrays Using Grid Computing -- Data Stream Systems and Large Scale Distributed Applications -- Scale Out Parallel and Distributed CDR Stream Analytics -- A Wide Area Network Optimization Service for Effective Access to Heterogeneous DataGrid Infrastructures -- A Profile-Based Aggregation Model in a Peer-To-Peer Information Retrieval System.

Sommario/riassunto

Since 2008, Globe has been an annual international conference on data management in grid and peer-to-peer systems. Initially, grid and peer-to-peer systems experienced significant success in scientific and file sharing applications. Today, these systems cover the management of large, distributed and heterogeneous data. These systems are characterized by high heterogeneity, high autonomy and dynamics of nodes, decentralization of control and large-scale distribution of resources. Research on data management in grid and peer-to-peer, relatively recent, aims to scale distributed systems and applications that require effective management of voluminous, large-scale distributed and heterogeneous data. The third edition of the international conference Globe was held in Bilbao, Spain during September 1-2, 2010. Globe provided opportunities for academia or industry researchers to present and discuss the latest research and applications on data management in grid and peer-to-peer systems. Globe 2010 received 26 papers from 15 countries. The reviewing process led to the acceptance of 13 papers for presentation at the conference and inclusion in this LNCS volume. Each paper was reviewed by at least two Program Committee members. The conference would not have been possible without the support of the Program Committee members, external reviewers, Organizing Committee, members of the DEXA conference and the authors. In particular, we would like to thank Gabriela Wagner and Roland Wagner (FAW, University of Linz) for their help in the realization of this conference.
