

1. Record Nr.	UNINA9910484513903321
Titolo	Progress in the science of functional dyes / / Yousuke Ooyama, Shigeyuki Yagi, editors
Pubbl/distr/stampa	Singapore : , : Springer, , [2021] ©2021
ISBN	981-334-392-3
Descrizione fisica	1 online resource (597 pages)
Disciplina	667.2
Soggetti	Dyes and dyeing - Chemistry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Preface -- Contents -- Part I Important Structures for Functional Dyes -- 1 Polymethine Dyes -- 1.1 Introduction -- 1.2 Bases of Polymethine Dyes -- 1.2.1 Classification of Polymethine Dyes -- 1.2.2 Synthesis -- 1.2.3 Basic Properties of Polymethine Dyes -- 1.3 Topics in Polymethine Dyes -- 1.3.1 Data Recording Materials -- 1.3.2 Sensitizers for DSSCs -- 1.3.3 Liquid Polymethine Dyes -- 1.3.4 Fluorescence of Polymethine Dyes -- References -- 2 Squaraine Dyes -- 2.1 General Remarks -- 2.2 Electronic Absorption and Fluorescence Properties -- 2.3 Synthesis of Squaraine Dyes by Condensation Reaction -- 2.4 Squaraine Dyes Synthesized by Pd-Catalyzed Cross-Coupling -- 2.5 Functionalization of Squaraine Dyes -- 2.6 Squaraine-Based Polymers and Oligomers -- 2.7 Miscellaneous Containing Squaraine Chromophores -- 2.8 Supramolecular Assembly of Squaraine Dyes -- 2.9 Conclusions -- References -- 3 Porphyrins: Syntheses and Properties -- 3.1 Introduction -- 3.2 meso-Tetra-substituted Porphyrins -- 3.2.1 Condensation of Pyrrole and Aldehyde -- 3.2.2 Lindsey Synthesis Using Dipyrromethanes -- 3.2.3 Porphyrins with Mixed meso-Substituents -- 3.2.4 meso-Substituted Porphyrins as Photosensitizers -- 3.3 Porphyrins Substituted at Pyrrole -Positions -- 3.3.1 Barton-Zard Pyrrole Synthesis -- 3.3.2 Benzoporphyrins -- 3.3.3 Reactions of Porphyrins at Pyrrole -Positions -- 3.4 -Extended Porphyrins -- 3.4.1 Electrophilic Substitution with meso-Aryl Groups -- 3.4.2 Oxidative Coupling of -Aminoporphyrins -- 3.4.3

Oxidative Fusion of Porphyrin Periphery -- References -- 4
 Phthalocyanine and Related Analogues -- 4.1 Introduction -- 4.2
 Synthesis of Phthalocyanine and Subphthalocyanine -- 4.2.1 Synthesis
 of Symmetric H₂Pcs -- 4.2.2 Synthesis of Low-Symmetry Pcs -- 4.2.3
 Synthesis of SubPc -- 4.3 UV/vis Absorption Properties of Pc
 and SubPc.
 4.3.1 Gouterman's Four-Orbital Model and Theoretical Description
 of Absorption Properties of Pc and SubPc -- 4.3.2 MCD Spectroscopy
 in Pc Chemistry -- 4.3.3 UV/vis Absorption and MCD Spectra
 of Perturbed Pc and SubPc -- 4.4 Recent Examples of Pc Analogues
 with Unique Optical Properties -- 4.4.1 Phosphorous(v) Pc as an NIR
 Chromophore -- 4.4.2 Contracted and Expanded Pc Analogues
 with Unique Properties -- 4.5 Summary and Outlook -- References -- 5
 BODIPY Dyes and Their Analogues -- 5.1 Three-Coordinate
 Organoboron Compounds -- 5.2 Four-Coordinate Organoboron
 Complexes -- 5.2.1 Boron Complexation -- 5.2.2 Representation
 Method for Four-Coordinate Organoboron Complexes -- 5.2.3 N⁺N
 Type Organoboron Complexes -- 5.2.4 BODIPY Analogue -- 5.2.5 O⁺O
 Type Organoboron Complex -- 5.2.6 N⁺O Type Organoboron Complex
 -- 5.2.7 N⁺C Monoboron Complex -- 5.3 Tridentate Boron Complex --
 5.4 Multinuclear Boron Complex -- References -- Part II Properties
 of Functional Dyes -- 6 Molecular and Crystal Structures
 of Polymorphic Organic Dyes and Coloured Organic Compounds -- 6.1
 Introduction -- 6.2 Examples of Organic Dyes -- 6.2.1 CuPc (CUPOCY)
 and Oxotitanyl Pc (BITSAY) -- 6.2.2 QA (QNACRD) and Its N,N'-
 Dibutylated Derivative (WAMFAS) -- 6.2.3 2,5-Diamino-3,6-Dicyano
 Pyrazine Dyes (KELFOX and KELGEO) -- 6.3 Examples of Coloured
 Organic Compounds -- 6.3.1 ROY (QAXMEH) -- 6.3.2 1,8-
 Dihydroxyanthraquinone (DHANQU) -- 6.3.3 Two Azomethine
 Compounds -- 6.4 Summary -- References -- 7 Photochromism -- 7.1
 Introduction -- 7.2 Azobenzene -- 7.3 Hexaarylbiimidazole -- 7.4
 Spiropyran, Spirooxazine, Naphthopyran -- 7.5 Fulgide -- 7.6
 Diarylethene -- References -- 8 Red and Near-IR Fluorescent Two-
 Photon Absorption Dyes -- 8.1 Introduction -- 8.2 Fluorescent Two-
 Photon Absorption Dyes -- 8.2.1 History and Demands -- 8.2.2 Red-
 and Near-IR-Light-Emitting Two-Photon Absorption Dyes.
 8.2.3 Biological Application of Red- and Near-IR-Light-Emitting Two-
 Photon Absorption Dyes -- 8.3 Two-Photon Absorption Dyes Bearing
 Aggregation-Induced Emission Nature -- 8.4 Conclusions --
 References -- 9 Molecular Designs for Solid-State Luminescent
 Properties and Recent Progresses on the Development of Functional
 Luminescent Solid Materials -- 9.1 Introduction -- 9.2 Mixture
 Materials -- 9.3 Steric Effect -- 9.4 Aggregation-Induced Emission --
 9.4.1 o-Carborane Materials -- 9.4.2 Boron Complex -- 9.5 Rational
 Design for AIE-Active Molecules -- 9.6 Conclusion -- References -- 10
 Circularly Polarized Luminescence (CPL) Based on Planar Chiral [2.2]
 Paracyclophane -- 10.1 Introduction: Circularly Polarized Luminescence
 (CPL) -- 10.2 Introduction: [2.2]Paracyclophane and Its Planar Chirality
 -- 10.3 Synthesis of Enantiopure Disubstituted [2.2]Paracyclophane
 and Optically Active -Stacked Molecules -- 10.4 Synthesis
 of Enantiopure 4,7,12,15-Tetrasubstituted [2.2]Paracyclophane
 and Optically Active -Stacked Molecules -- 10.5 Synthesis
 of Enantiopure Bis-(Para)-Pseudo-Ortho-Tetrasubstituted [2.2]
 Paracyclophane and Syntheses of Optically Active -Stacked Molecules
 -- 10.6 Synthesis of Enantiopure Bis-(Para)-Pseudo-Meta-
 Tetrasubstituted [2.2]Paracyclophane -- 10.7 Conclusion -- References
 -- Part III Applications of Functional Dyes -- 11 Fluorescent
 Chemosensors -- 11.1 Definition of "Fluorescent Chemosensors" --

11.2 Molecular Structure of Fluorescent Chemosensors -- 11.2.1 Components -- 11.2.2 Representative Structures -- 11.3 Dye Selection in Fluorescent Chemosensors -- 11.3.1 Absorption/Fluorescence Wavelengths -- 11.3.2 Brightness -- 11.3.3 Photostability -- 11.3.4 Two-Photon Absorption Cross Section -- 11.3.5 Sensitivity to Environmental Condition -- 11.3.6 Other Considerations -- 11.4 Operation Principles of Fluorescent Chemosensors. 11.4.1 "Primordial" Fluorescent Chemosensors Based on Host-Guest Chemistry -- 11.4.2 Photo-Induced Electron Transfer -- 11.4.3 Heavy Atom Effect -- 11.4.4 Forster Resonance Energy Transfer -- 11.4.5 Formation of Emissive -System via Chemical Reaction -- 11.4.6 Excimer Emission -- 11.4.7 Assembly- or Disassembly-Induced Emission -- 11.4.8 Intramolecular Charge Transfer -- 11.4.9 Intramolecular Proton Transfer -- 11.5 Outlook: Fluorescent Nanoparticles as Next-Generation Fluorophores -- References -- 12 White-Light Emissive Materials Based on Supramolecular Approach -- 12.1 Introduction -- 12.2 Hydrogen Bonding -- 12.3 Metallo-coordination -- 12.4 Host-Guest Interaction -- 12.5 Self-assembly -- 12.6 Supramolecular Gels -- 12.7 Dynamic Covalent Bond -- 12.8 Summary -- References -- 13 Photodynamic Therapy -- 13.1 Introduction -- 13.2 Methods for Evaluation of Singlet Oxygen 1O_2 Generation -- 13.3 Porphyrin-Based Photosensitizing Dyes -- 13.4 Phthalocyanine-Based Photosensitizing Dyes -- 13.5 BODIPY-Based Photosensitizing Dyes -- 13.6 Xanthene and Phenothiazinium Photosensitizing Dyes -- 13.7 Heteropolycyclic Photosensitizing Dyes -- 13.8 Pyrylium, Azinium, and Squalene Photosensitizing Dyes -- 13.9 Photosensitizing Dyes Based on Transition Metal (Ru, Ir, Pt) Complex -- 13.10 Conclusions and Perspectives -- References -- 14 Photoenergy Conversion (Dye-Sensitized Solar Cells) -- 14.1 Introduction -- 14.2 Dye Sensitizers for N-TiO₂-Based Type-I DSSCs -- 14.2.1 Ruthenium (II) Polypyridyl Complex Dyes -- 14.2.2 Polyene Dyes -- 14.2.3 Coumarin Dyes -- 14.2.4 Thiophene-Based Dyes -- 14.2.5 Hemicyanine Dyes -- 14.2.6 Indoline Dyes -- 14.2.7 Heteropolycyclic Dyes -- 14.2.8 Xanthene Dyes -- 14.2.9 Perylene Dyes -- 14.2.10 Porphyrin Dyes -- 14.2.11 Merocyanine Dyes -- 14.2.12 Squaraine Dyes -- 14.2.13 Cyanine Dyes -- 14.2.14 Phthalocyanine Dyes. 14.2.15 Boron Dipyrromethene (BODIPY) Dyes -- 14.2.16 Phenothiazine and Phenoxazine Dyes -- 14.2.17 Cyclopentadithiophene and Dithienosilole (DTS) Dyes -- 14.2.18 Polymeric Dyes -- 14.2.19 D--a Dyes with Pyridine, Pyrazine, and Triazine as Anchoring Group -- 14.2.20 Double-Branched Double-Anchoring Dyes -- 14.2.21 Co-Sensitized DSSC Employing Two Dyes -- 14.3 N-ZnO-Based DSSCs -- 14.3.1 Xanthene Dyes -- 14.3.2 Indoline Dyes -- 14.3.3 Perylene Dyes -- 14.3.4 Heptamethine-Cyanine Dyes -- 14.3.5 Squaraine Dyes -- 14.4 Catechol Dyes for N-TiO₂-Based Type-II DSSCs -- 14.5 P-NiO-Based DSSCs -- 14.5.1 Triphenylamine Dyes -- 14.5.2 Fluorene Dyes -- 14.5.3 Diketopyrrolopyrrole Dyes -- 14.5.4 Squaraine Dyes -- 14.5.5 Perylene Monoimide Dyes -- 14.6 Summary -- References -- 15 -Conjugated Polymers Incorporating Naphthalene-Based Nitrogen-Containing Heteroaromatics for Organic Photovoltaics -- 15.1 Introduction -- 15.2 Synthesis of Naphthalene-Based Nitrogen-Containing Heteroaromatic Rings -- 15.3 -Conjugated Polymers Incorporating Naphthalene-Based Nitrogen-Containing Heteroaromatic Rings -- 15.3.1 NTz-Based Polymers -- 15.3.2 NOz-Based Polymers -- 15.3.3 TZNT-Based Polymers -- 15.3.4 NPz-Based Polymers -- 15.3.5 NOT-Based Polymer -- 15.4 Summary -- References -- 16 Luminescent Materials for Organic Light-Emitting Diodes -- 16.1 Introduction -- 16.2

Fluorescent Materials: First-Generation Emitters -- 16.2.1 Fluorescent Emitters Based on Low-Mass Molecular Systems -- 16.2.2 Fluorescent Conjugated Polymers and Dendrimers -- 16.3 Phosphorescent Materials: Second-Generation Emitters -- 16.3.1 Phosphorescent Emitters Based on Organoiridium(III) Complexes -- 16.3.2 Phosphorescent Emitters Based on Organoplatinum(II) Complexes -- 16.4 TADF Materials: Third Generation Emitters -- 16.4.1 Advantage of TADF Emitters in OLED Applications. 16.4.2 TADF Emitters Based on Donor-Acceptor Structures.
