Nota di contenuto	About this book -- Understanding Cambodia -- Phnom Penh Water Supply Authority -- Four Domain (4-D) Framework for analysis of urban water utility -- Analysis of PPWSA -- Gap analysis of four domains -- Views of the customers -- Key challenges facing PPWSA -- Lessons learnt for developing countries -- A Management Tool Kit for Chief Executives.
Sommario/riassunto	This book analyses how a water utility from a developing country, Phnom Penh Water Supply Authority, that was totally dysfunctional, corruption-ridden and literally bankrupt in 1993, became one of the most successful water utilities of the developing world in only about 15 years. By 2010, some of the performance indicators of this public sector utility were even better than London, Paris or Los Angeles. The book further analyses the enabling conditions that made this remarkable transformation possible. Based on this analysis, a framework is recommended for water utilities from developing countries so that they can also be transformed into functional, efficient, equitable and financially viable institutions on a sustainable basis.

Sommario/riassunto	This work is devoted to morphosyntactic processing in the earliest stages of L2 Polish. The target structure taken into consideration is the morphosyntactic opposition between the nominative and accusative case, respectively corresponding to the subject and object function. This is the first book-length work devoted to the VILLA project, a large multi-national initiative within which 90 adult learners took part in a first-exposure, 14-hour Polish course under controlled input conditions. As participants had never been exposed to Polish or other Slavic languages, the experiment portrays the very first contact with a completely new target language; moreover, since the learners were evenly distributed among five L1 groups, L1 interference can also be investigated in depth. In addition to an in-depth analysis of the effect of input properties on morpho-syntactic processing, the book discusses sensitive methodological points such as the role of semantics in semi-spontaneous production as well as the impact of elicitation techniques.
